Changes from Prior Year CIP: Planned funding for FY 2016 - 2020 in last year's CIP was moved back to FY 2017 - 2021 based on prior year balances available to completed FY 2016 initiatives. No other changes from prior year CIP.

Project Description & Justification

This project provides for the comprehensive design of a signage, wayfinding, and identity system that will project a consistent image for the entire City, reduce clutter, promote walking and mass transit, and be sustainable and expandable. A well-designed and implemented wayfinding program will increase identification of key sites and attractions, including parking, and support the City's goals of orienting and informing visitors and residents, motivating them to visit historic sites, and making the navigation of the City easier.

Work sessions with the City Council, Planning Commission, and the Board of Architectural Review were held in January 2009. The design phase of this project was approved in FY 2010. Implementation began in FY 2011 with Phase 1, and remaining phases, occurring over time as funding becomes available. Implementation involves the fabrication and installation of the wayfinding signs and will be coordinated with the implementation of the Braddock Road, King Street, Mt. Vernon Avenue, Arlandria, Waterfront, Beauregard, Potomac Yard, and Landmark/Van Dorn plans. In order to distribute the cost of the wayfinding program over multiple years, a phased approach is recommended for implementation.

The completed and planned project implementation schedule, including estimated cost and timeline for completion, is provided on the next page.

City's Strategic Plan & Budget Guidance

Primary Strategic Plan Goal: Goal 1 – Economic Development

Focus Area: Livable, Green, & Prospering City

- Promote neighborhoods that are amenity-rich
- Promote an attractive urban environment that reflects our history and provides well-functioning infrastructure
- Increase the economic benefits of tourism to the City
- Ensure Alexandria supports, retains, and attracts businesses
- Increase transportation system mobility, connectivity, and accessibility that supports the City's economy

External or Internal Adopted Plan or Recommendation

- City of Alexandria Wayfinding System Design Guidelines Manual approved by the Planning Commission, September 2010

Additional Operating Budget Impact

As part of the FY 2015 Operating Budget, a 0.5 FTE position was added in T&ES to support this, and other, transportation related projects, paid through the TIP. Those costs are now part of the FY 2016 operating budget and not reflected in the table above. Beginning FY 2021, \$25,000 is planned annually to replace signs and kiosks on an as-needed basis through General Fund sources.

Wayfinding Plan Implementation

City of Alexandria, Virginia

Community Development

Transportation Signage and Wayfinding System (Continued)

Phase 1 - Parking signs in Old Town (\$100,000, FY 2010) – Completed

Phase 2 - Old Town visitor kiosks, pedestrian pointers (\$295,000, FY 2013) – Planning complete; fabrication and installation in late summer 2015

Phase 3a - Vehicular signs for primary routes (\$225,000, FY 2014 –FY 2016) – Currently in planning phase; fabrication and installation in spring 2016

Phase 3b – Metro station visitor kiosks, highway signs, freestanding interpretive panels (\$200,000, FY 2017)

Phase 4 - City gateways, parking signs (non-Old Town), vehicular signs for secondary routes, shared use trail signs, destination identification signs (\$515,000, FY 2018)

Phase 5 - Destination Identification signs (City attractions/parks/civic-double post), vehicular signs for secondary routes (\$361,000, FY 2019)

Phase 6 - Destination Identification signs (City parks/civic-single post), pedestrian mini kiosks and pointers (Waterfront and non-Old Town), interpretive ground plane medallions (\$432,000, FY 2020)

Phase 7 - Interpretive panels and two-sided kiosks (Waterfront), district markers (\$241,000, FY 2021)

Vehicle Ownership

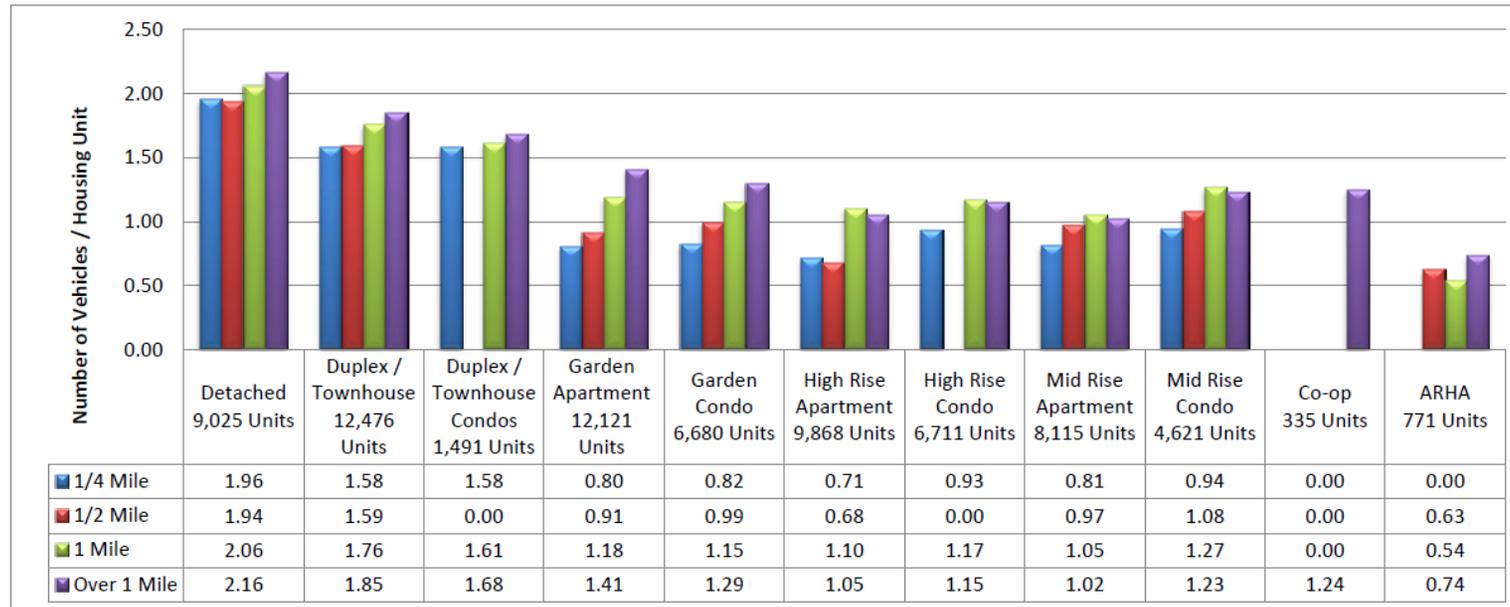

Vehicle Ownership by Residential Housing Type and Proximity to Metro

The purpose of this project was to gain a better understanding of residential parking needs and, therefore, better inform policy decisions by analyzing current vehicle ownership and, in the future, vehicle ownership trends.

For this study, vehicle ownership and parking need is expressed as the ratio between the number of vehicles owned to the number of housing units. Residential units were classified into 44 subcategories by housing type and proximity to Metro, which are thought to be closely correlated with auto ownership.

Analysis highlights

- *Highest and lowest vehicle generators:* Detached houses had the highest number of vehicles per unit, at an average of 2.11; while Mid Rise Apartments had the lowest, at an average 1.01 vehicles per unit. (Because of their unique nature, ARHA-managed properties were looked as their own class, regardless of actual structure type. However, they were lower than mid-rise apartments at an average of 0.60 vehicles per unit).
- *Proximity to Metro:* The average number of vehicles per unit “greater than 1 mile from Metro” was 32.7% higher than the average number of vehicles per unit “within ¼ mile of Metro”.
- *Multifamily condominiums vs. apartments:* Multifamily units classified as condominium had slightly more (8.54%) vehicles per household than those classified as apartment.

Vehicle Ownership

Methodology

Each structure in the City was classified by residential structure type, ownership (where applicable) and straight line distance to the nearest Metro.

<u>Structure Type</u>	<u>Ownership</u>	<u>Proximity to Metro</u>
<ul style="list-style-type: none">• Detached• Duplex / Townhouse• Garden• Mid Rise Apartment• High Rise	<ul style="list-style-type: none">• Apartment• Condominium• Cooperative• ARHA	<ul style="list-style-type: none">• Less than ¼ Mile• Greater than ¼ mile less than ½ mile• Greater than ½ mile less than 1 mile• Greater than 1 mile

The 2011 personal property tax file containing only the total number of active vehicle counts at each unique property address (excluding boats & trailers) was provided by the Finance Department. This file contained a total count of 106,294 vehicles. Of these 105,347 could be matched within the City's GIS to a structure. Using a geoprocessing model, each vehicle was associated with the above property characteristics. 5,676 were matched to a structure containing exclusively non-residential uses and were not considered in the analysis. The 947 vehicles* which could not be matched were not included in the analysis. The remaining 99,671 vehicles were matched to 72,214 residential units in 24,028 structures. 84 of these structures also included some use other than residential; no additional processing was done for these the structures and all vehicles were attributed to the residential units.

Notes

- No result was reported for study categories with fewer than 100 housing units. These have a value of 0.00 in the table above (i.e. Townhouse Condos within ½ mile of Metro).
- Although the analysis shows that access to transit is correlated with the number of vehicles owned, no other transit or alternative transportation opportunities were evaluated.
- Proximity to Metro assumed the ability to walk to Metro, but the analysis used straight line buffers, not walking sheds
- Other factors which might influence vehicle ownership decisions such as availability of parking or proximity to other amenities such as grocery stores, recreation centers, medical offices etc. were not evaluated.
- 525 of 21,841 detached homes and townhouses were attributed more than 5 vehicles. These were included in the analysis. Elimination of the abnormally high numbers or reducing them to an arbitrary, but reasonable number would likely slightly reduce the ratio for these structure types. It is not known if this was the case with multifamily units. Due to inconsistencies in the formatting of unit numbers, multifamily unit numbers were removed before summarizing data to the exterior entrance address. Therefore, all initial vehicle counts for these building included multiple housing units.

* Of the 947 addresses that could not be matched to Alexandria's GIS, 355 were found to be in neighboring jurisdictions, 170 had incomplete or non-existent street numbers and 422 require further research.
