APPENDIX I

ARTIFACT INVENTORY

Artifact Inventory

6/30/2005

Category	Group	Class	Type	Sub-Type	Heat	Count	Weight (g)	Comments
HOFFMAN I 44AX112								
FS 7	BLOCK 3, TRENCH 3.99				Feature 3.99-01	Strat II		SAMPLE
HISTORICS	Architecture	Metal	Unidentified	Nail		1		
	Kitchen	Ceramic	Domestic Brown Stoneware	Brown Salt-Glaze, Undecorated		2		hollowware, mends, poss. domestic, 1750-1900
	Kitchen	Ceramic	Pearlware	Underglaze Floral Polychrome		4		saucer, rim, mends, foliate motif, 1795-1815
	Kitchen	Ceramic	Redware	Black Glaze, Fine		1		indeterminate form
	Kitchen	Ceramic	Redware	Brown Glaze		2		hollowware, base, mends
						Total Count= 10	Total Weight=	
FS 8	BLOCK 3, TRENCH 3.99, MILL RACE				Feature 3.99-01			SAMPLE FROM FILL
HISTORICS	Activities	Metal	Miscellaneous Hardware	Barbed Wire		1		POST 1870
	Kitchen	Glass	Machine Made Bottle	Green		3		1898-PRESENT
	Miscellaneous	Metal	Unidentified Object	Iron/Steel		3		unidentified iron fragments
	Miscellaneous	Synthetic	Miscellaneous	Plastic/Other		1		melted plastic/tar
	Transportation	Metal	Stable Item	Horseshoe		2		
						Total Count= 10	Total Weight=	
FS 19	BLOCK 3, TRENCH 3.99, MILL RACE				Feature 3.99-01			SAMPLE; TOP OF WALL
HISTORICS	Arms	Metal	Projectile Part	Other		1		carved, poss. .69 cal Austrian bullet

RE: **44AX112, Wood Identification**

Seven discrete wood samples were submitted for identification from various architectural elements associated with a middle 19th century pier located on Cameron Run, at the Hoffman Site (44AX112), Alexandria, Virginia. Wood samples were collected during archaeological excavations from well-preserved portions of structural upright timbers (pilings) and pier deck (planking).

Key elements of the pier were sampled for species identification by removing a small section of wood fibers. Wood samples were stored as-recovered in vinyl bags. Many samples were recovered in a moist or saturated state, and were not dried prior to analysis. In order to achieve the clear traverse section of wood fibers required for identification, exposed fibers were shaved with a scalpel. Each specimen was then examined under 10X-40X magnification and key anatomical features were noted. The structure of each specimen was compared with appropriate keys (Constantine 1987; Edlin 1969; Panshin and deZeeuw 1980) and checked against wood specimens from a modern comparative collection representative of the forest cover of the Eastern United States.

Classification of waterlogged wood is often hampered by the deterioration of diagnostic features due to post-depositional processes (Pearsall 1989). Cell walls can disintegrate due to repeated freezing and thawing, and decay caused by anaerobic bacteria and fungi often obliterate key morphological characteristics (Dimbleby 1978). Examination of wood fibers from the Hoffman pier revealed that some destruction of minute features had taken place which complicated species identification, but that generally the recovered wood fibers were in good condition, with most aspects of diagnostic structure intact. One hundred per cent of the analyzed wood specimens were minimally identifiable to the genus level.

The wood assemblage from Hoffman revealed an overwhelming predominance of white oak species (*Quercus* spp. *LEUCOBALANUS* group) in the pier's construction. White oak accounted for 71 per cent of the analyzed wood specimens. Other wood taxa identified included unidentifiable oak

species (*Quercus spp.*)(14 per cent), and yellow or hard pine species (*Pinus spp.*)(14 per cent). Six wood samples were submitted from the upright pilings that supported the pier structure. All of these were identified as oak species - mostly white oak, with one specimen which was severely punky identified only as oak (minute features being indistinct due to rot). One sample of the pier deck, or planking was submitted for analysis, and was identified as a species of yellow or hard pine. The results of analysis are detailed in the table below.

White Oak (*Quercus spp.*)

Segregation of particular species of white oak is not possible based on minute anatomy (Panshin and deZeeuw 1980:586-587). In the vicinity of the project area, native white oak species (LEUCOBALANUS group) include white oak (*Quercus alba*), swamp chestnut oak (*Q. michauxii*), post oak (*Q. stellata*), and overcup oak (*Q. lyrata*). Lumber of white oak species has historically been used for a great variety of applications where hardness, resiliency and natural durability are required. The white oaks are heavy woods, averaging 47 pounds per cubic foot, and are very hard, with a specific gravity ranging from 0.57 to 0.81 (USDA 1956:8). The pores of the heartwood are usually plugged with tyloses, a growth that renders the wood impervious to liquids and makes the wood well-suited for tight cooperage, and other applications requiring prolonged contact with water (Bishop 1999:124-25). White oak (*Q. alba*) is the most important lumber tree of the white oak group and one of the best oaks with high-grade, all-purpose timber. White oak species have long been among the leading woods for marine architecture (USDA 1956:8).

Yellow or Hard Pine (*Pinus spp.*)

The yellow or hard pine species cannot be separated to the species level on the basis of minute wood structure (Panshin and deZeeuw 1980:444-47). Various species of the hard pine group occupy a broad range of environmental zones from New Jersey south to the Mississippi river delta. Members of the hard pine group include the following species: longleaf pine (*Pinus palustris*), shortleaf pine (*P. echinata*), loblolly pine (*P. taeda*), slash pine (*P. ellioti*), pitch pine (*P. rigida*), and pond pine (*P. serotina*). Hard pine species native to northern Virginia include loblolly pine and pond pine. Contemporary lumber trade classifies hard pines according to structural density, with longleaf and slash pines frequently exhibiting multiple late-wood bands measuring up to 0.2 inches in diameter against 0.1 inches or less for other southern pines (Kukachka 1960:890). Such classification does not translate well to specimens recovered from these archeological contexts due to the distortion common water-logged specimens.

Hard pines have been of great economic importance throughout the southern and eastern United States for centuries. Due to strength, stiffness and hardness, and good shock-resistance properties, timber from this group of pines is well-suited for use as structural timbers in bridges and trestles, and in ship and boat building (Panshin and deZeeuw 1980:444-447; Bishop 1999:206-207). Even after the widespread use of chemical preservative treatments to marine timber, southern pine species remain choice woods for the construction of boats and water-dependent structures (Stefferd 1949:733).

PUBLIC INTERPRETATION

THE HOFFMAN CENTER ARCHEOLOGICAL PROJECT

PUBLIC INFORMATION PACKET

PUBLIC SALE OF LANDS.
By virtue of a decree of the Court of the United States for the fifth circuit, Virginia district, in the suit of Hepburn and Dundas against Thomas West, in chancery—will be sold on the premises to the highest bidder, at Public Auction, for ready money, on Monday the 20th of August next, at 12 o'clock A. M. if fair, if not, the next fair day at the same hour.

A TRACT OF LAND,
situate on Hunting Creek, in the County of Fairfax and Commonwealth of Virginia, within one mile of the town of Alexandria, and near to the Cameron Mills, whereon major Thomas West now resides, supposed to contain from fifty to eighty acres.

Also,
on the same day will be offered for sale, *The residue of said Thos. West's Land,* lying on the northwest line of the patent of Carr and Simpson, adjacent to the tract before mentioned, not disposed of by the said Thomas West at the time certain mortgages were made by him to Hepburn and Dundas.

Richard M. Scott, }
F. Peyton, }
Amos Alexander, } *Cornell's*

July 12, '84

Public Sale Notice for Thomas West's property, taken from the August 8, 1804, *Alexandria Daily Advertiser*.

Frederick, Maryland 21701

THE HOFFMAN CENTER ARCHEOLOGICAL PROJECT

Project History

In April 1998, the Hoffman Management Company initiated plans for expanding the development of its properties along Eisenhower Avenue in Alexandria, Virginia. As part of its planning activities and as required under the Alexandria Archeological Protection Ordinance of 1989, Hoffman Management retained R. Christopher Goodwin & Associates, Inc, a cultural resource management and planning firm, to conduct archeological studies for the undeveloped blocks of its property surrounding the Hoffman I and II office complex and the Holiday Inn. Since that time, Goodwin & Associates, Inc. has continued to provide archeological services for Hoffman Management, as they have filed specific, block-by-block, site plans with the city. All of the work on the Hoffman property has been coordinated closely with Dr. Pamela Cressey and her staff at Alexandria Archaeology.

Project Methods

Several different types of archeological studies, using a variety of methods and techniques, have been completed as the Hoffman project has proceeded. The archeological work has been timed to coincide with specific development plans filed for various blocks of the property. The research objectives and the methods used in the field during each stage of the study have been dictated by the nature of the planned site development and the field conditions on site. The following types of studies have been completed to date at the development site.

- *Spring, 1998: Preliminary archival study and archeological assessment.* This preliminary study evaluated documentary sources, historic maps, and the results of earlier archeological work done on and in the vicinity of the Hoffman Property to predict where and what kinds of archeological resources might be present on the as-yet undeveloped parts of the Hoffman tract. In general, the study found that:
 1. This section of Alexandria has been occupied by Euro-Americans since at least the eighteenth century.
 2. Until the mid-nineteenth century, the property functioned primarily as a farm and as the site of two gristmills known as the Cameron Mills. Cameron Farm remained an active agricultural complex until the end of World War I.

3. In 1851, one of the two mills was purchased by the newly formed Alexandria Water Company and converted into a pumping station to divert water from the mill race and pump it uphill to the reservoir on Shuter's Hill. The water company modified and continued to use this system until the 1930s. The other mill, eventually converted to steam power, continued to grind grain until the end of the nineteenth century.
 4. After World War II, modern development began on the property. On the northern edge of the property, adjacent to the Southern Railroad, several light industrial buildings were constructed. Much of the rest of the property was graded and filled to provide space for a large trailer court. The trailer court was eliminated when the present Hoffman complex and other small industrial buildings were constructed on the site. In the process, the buildings associated with the Cameron Farm complex were removed.
- *Fall 1998-Spring 1999:* Testing phase in the northern portions of Blocks 2 and 3, using a combination of mechanized backhoe trenches and manual excavation of small test units revealed portions of the main house and outbuildings from Cameron Farm, a second dwelling, and sections of the mill race.
 - *Summer 1999-Winter 1999:* Monitoring of site preparation in Block 4 (to be developed by the AMC theatre chain) and relocation of utility lines around Block 4 revealed the location of the West family burial vault and additional features associated with the main Cameron Farm dwelling house.
 - *Spring 2000:* Expanded testing phase in the northern portions of Blocks 2 and 3, again using mechanized backhoe trenches and manually excavated small test units, revealed further details and outbuildings of the Cameron Farm complex. Excavation of the West Family burial site (under a permit issued by the Virginia Department of Historic Resources) and analysis of the remains buried there is the final stage of this round of excavations.

When the present phase of archeological testing has been completed and the AMC complex has been built, Goodwin & Associates will test the site of the two gristmills and complete a final report on the entire archeological project. The excavated members of the West Family will be reinterred at an as-yet-undetermined location elsewhere on the Hoffman property.

THE WEST FAMILY PERIOD (1678 – 1805)

HISTORY

The Fairfax family first granted the tract of which the Hoffman property is a part to two individuals, Carr and Simpson, in 1678. Twenty years later, John (I) West, a planter living in Stafford County, bought half of the 627-acre Carr-Simpson grant from John Simpson. In 1716, John West bequeathed this parcel to his grandson John (III), or (in case the grandson died early leaving no heirs) to his son by a second marriage, John West (II).

John (III) indeed died early and left neither heirs nor will. However, in an apparent violation of his grandfather's wishes, the Simpson tract was acquired not by John (II), but by John (III)'s brother, Hugh West. Although John (II) challenged Hugh's acquisition of the property in court, he was never able to sustain his claim. Hugh remained in possession of the Simpson tract, and in 1738, also purchased the adjacent Carr grant. Thus, by the mid-eighteenth century, Hugh West owned the entire Carr-Simpson grant.

City Archaeologist Pamela Cressey has observed that "(t)he West family—Hugh West in particular—was a tremendously instrumental force in the establishment of Alexandria as a town." In addition to being a prominent landowner, Hugh West established the first tobacco inspection station in Northern Virginia on properties he owned at the foot of what is now Oronoco Street. Because "West's Point" was strategically located on the Potomac River, it was well situated for commercial shipping. Regionally produced tobacco crops could be conveniently exported from this site, which also was the Virginia terminus of a ferry to Maryland. Not surprisingly, West's Point formed the nucleus of the town of Alexandria when it was formally established by the Virginia Assembly in 1749.

Hugh West's will, probated in 1754, left to his son, John (IV) "all that property on which I now live"—the Carr-Simpson grant. Hugh's wife, Sybil Harrison West, continued to live in the house that she occupied with her husband, presumably together with her son and his family. When John (IV) passed away in 1776, he bequeathed the 627-acre property to his eldest son, Thomas West, but specified that his grandmother could continue to live on the ancestral plantation. Sybil West, who outlived both her husband and two sons, died in 1787 at the age of 83. Two obituaries in the *Alexandria Gazette* from this period note the interment of Sybil West and Colonel George West, one of her children, in the "family vault" outside of Alexandria.

Thomas West, a Revolutionary War veteran who inherited the Carr-Simpson tract, apparently suffered a series of financial reverses beginning in the 1780s. To cover his debts, he began to mortgage and later sell portions of this property to a variety of individuals. In 1791, he transferred an 8-acre tract to William Bird for the purpose of erecting thereon a grist mill; significantly, this deed specified that Bird could construct a mill race through West's property, but that it could not come any closer than twenty feet to Thomas West's "vault." Two years later, Thomas sold an additional 22 acres to the milling firm of Stump and Ricketts (partners with William Bird).

By 1805 (the year before he died), Thomas West apparently was so strapped financially that the remainder of the Carr-Simpson grant was sold at public auction to satisfy his debts. The purchasers of these remaining lands were, predictably, the partners Stump and Ricketts, owners of the Cameron Mills. Today, Thomas West's "vault" and the individuals interred within and

around it are all that remains of the important family that once controlled this tract and contributed so much to the history of the City of Alexandria.

ARCHEOLOGY

The location of the West family burial vault first was noted in December 1999, during the excavation of a new utility line trench. The find was reported to Alexandria Archaeology and to the Hoffman Company, and strategies for investigating the vault and its contents were discussed. In April 2000, the Virginia Department of Historic Resources issued a burial excavation permit for the vault and for a large area surrounding it. The permit specified how the remains were to be removed, and also required that a physical anthropologist with expertise in skeletal analysis be retained to analyze any human remains to determine, where possible, the age, sex, stature, pathology, and cause of death of each individual.

Drs. Clifford and Donna Boyd, professors at Radford University in Virginia, were retained to perform the analysis. Because of the fragmentary nature of the remains, which had been damaged by nearly two centuries of repeated moistening and drying and had been further impacted by the grading and utilities installation for the 1950s-era trailer court, analysis of the remains was carried out in the field. Preliminary analysis indicates that at least two adult males and one adult female were interred within the vault itself. The documentary sources suggest that one male probably is George West, and that the female is Sybil West. The identity of the other individual is unknown, although it may be Hugh West, Sybil's husband. Most recently, the discovery of several other bones has suggested that a fourth individual, possibly an adolescent, also was buried in the vault.

The seven graves outside of the brick vault contain the remains of six adults and one child, possibly between one and five years of age. Two of the adults were middle-aged or older. Only three of these skeletons are sufficiently intact to warrant tentative designation of their sex; again, there appear to be two males and one female.

CAMERON MILLS, CAMERON FARM, AND THE ALEXANDRIA WATER COMPANY

Between 1804 and 1834, the mill complex was under the joint ownership of Stump and Ricketts; from 1834 to 1848, Richard Windsor held title to the property. In 1848, Richard Windsor sold that 146-ac parcel of land called "Cameron," including the mills, to Reuben and Robert F. Roberts, Quaker brothers from New Jersey. The Roberts family, in partnership with Edmund Hunt, continued to operate at least one of the mills until 1894. In 1851, they sold the eastern mill building to the newly formed Alexandria Water Company.

In addition to the mill, the "Cameron" property was an active agricultural complex. The 1850 Federal census indicated that three families occupied adjacent houses on the property: Reuben Roberts, the miller; Joseph Allen, a male [*sic*] driver; and Robert Roberts, whose occupation was designated as "farmer" (United States Census, Population Schedule for Fairfax County 1850). An undated survey plat, found in the files at Alexandria Archaeology, showed that the Manassas Gap Railroad right of way traversed the Roberts property along approximately the same route as the current Eisenhower Avenue. This map depicted the mill, a "cow house" and a "barn" immediately south of the millrace, two dwelling houses, and some "frame houses" around Roberts Lane as landmarks for the survey. Maps of the Civil War era and the early twentieth century all depicted a variety of additional buildings within the Cameron Farm complex, although these features vary in their alignments. Most of these structures clustered along Mill Road.

A 1945 letter written by James Roberts, grandson of Robert Roberts indicated that Hunt and Roberts' business included both the mill and an associated feed supply outlet. Two accompanying sketches documented the relative locations of other buildings on the property and the layout of the principal Roberts family residence. In addition to the mill, the water company pumping station, and the main house, Cameron Farm once housed several other buildings, including a brick mill stable (burnt 1917); a frame school house (destroyed ca. 1908); a mill residence; a cow barn and shed; a horse stable (burnt ca. 1914) with various shed additions to house farm equipment and a blacksmith and carpenter shop; a sheep pen; a below-ground silo; a greenhouse and storeroom; a smoke house; an ice house; and additional service buildings. These structures all clustered along Roberts Lane and the farm/mill entrance road that entered the property from Telegraph Road south of the millrace. The remaining portions consisted of farm fields and pastures. Roberts' description and extant photographs demonstrate that the Cameron Farm remained essentially undeveloped until the end of World War II, when the last of the Roberts family sold the property.

The Alexandria Water Company, founded in 1851 to ensure an adequate supply of potable water for Alexandria's expanding population, used the water from the Cameron Mill millrace to provide city water. An agreement between the Roberts brothers and the directors of the company stipulated that the Roberts' would construct a dam upstream across Cameron Run and would "repair and improve and put into complete order the present mill race belonging to the [sd] Cameron Mills." The company's first two annual reports indicated that the water company made substantial changes in the mill itself, including the replacement of the old mill wheel with a new iron one, the construction of a "solid foundation" to support the new wheel, widening the mill races, and "several other improvements." Repairs to the water company's physical properties continued throughout the 1860s and 1870s, as freshets, heavy rains, and animals damaged appurtenant structures, including the millrace. Improvements included the installation of a "dam and watergates just east of Occoquan Road (presently, Telegraph Road), repair and straightening of the mill race, construction of a

"tumbling dam" at the head gate, and apparently a new race. After the demolition of the adjoining gristmill in 1928, the Water Company added to and modified the original mill structure.

ARCHEOLOGY

The archeological investigations of the Cameron Farm, conducted in several stages by Goodwin & Associates, Inc. between the fall of 1998 and the spring of 2000, identified structural remains and landscape features associated with the Cameron Farm complex. The remains of the buildings in this complex were registered with the state of Virginia as Site 44AX182.

Excavations in the northern portion of Block 2 uncovered the foundations of the multi-part Cameron Farm house, its adjacent greenhouse and its smokehouse. Some sources believe that the central brick portion of the main Cameron farmhouse was originally built as a tavern during the middle of the eighteenth century; however, analysis of the patterns of the brick seem to indicate that, in reality, it was constructed near the turn of the nineteenth century. The basement beneath the original brick part of the main house was found to have a curious ramped bulkhead entrance, thought to have been installed to facilitate storage of bulky items in the basement. Beneath the two-story frame addition built by the Roberts family in the 1850s, archeological excavations showed that a coal-fired furnace had been installed, probably during the early twentieth century. Testing of other portions of Block 2 revealed that many of the outbuildings adjacent to the main farm dwelling had been destroyed during grading or filling during construction of two separate industrial warehouse buildings that stood in this location until early this year.

At the northern end of Block 3, similar testing documented a nineteenth century domestic structure with a porch, a set of brick steps that led into a shallow basement, and an H-shaped hearth.

Finally, a series of four mechanically excavated trenches around the perimeter of the farmyard revealed the remains of the old millrace, which had been filled in with modern debris.

APPENDIX V

RESUMES OF KEY PROJECT PERSONNEL

MARTHA R. WILLIAMS, M.A., M.ED.

PROJECT MANAGER/ARCHEOLOGIST/HISTORIAN

Martha R. Williams, M.A., M.Ed., Project Manager, holds a B.A. (1960) from Lebanon Valley College; a Master of Education, with emphasis in the Social Sciences, from the University of Pennsylvania (1965); and an M.A. in History, with emphasis in Applied History, from George Mason University (1987). She was a Coe Fellow in American Studies at SUNY Stony Brook in 1982 and 1989. While completing her internship with George Mason University, she co-authored the Heritage Resource Management Plan for Fairfax County, Virginia.

Ms. Williams' past experience in cultural resource management and in historical archeology began over 30 years ago with a field school with Colonial Williamsburg in 1972. As co-director of the Fairfax County Seminars in historical archeology for high school students (1973-1987), she assisted in or directed investigations at 15 archeological sites in Fairfax County. Her experience also included volunteer work on both prehistoric and historic sites with the Fairfax County Heritage Resources Branch, for the City of Alexandria, for the Virginia Division of Historic Resources, and for the National Park Service, including excavations at the Lost Colony site on Roanoke Island. She also worked for the National Park Service as an archeological laboratory technician following her retirement from teaching.

Since joining Goodwin & Associates, Inc., in 1989, Ms. Williams has served as historian, project archeologist, project manager, and public interpretation specialist for numerous studies conducted by the firm. As historian, she has conducted research for company projects in such diverse eastern seaboard and central states as Maryland, Virginia, New York, Illinois, Pennsylvania, Maine, Massachusetts, Vermont, North Carolina, Georgia, Mississippi, Arkansas, and Louisiana, as well as in the District of Columbia and Puerto Rico. She is familiar with archival resources for both terrestrial and underwater projects. She has managed all types of archeological projects, including preparation of archeological predictive models and disturbance studies; Phase I and II archeological surveys and evaluations; Phase III archeological data recovery projects; and cultural resource planning documents for Federal agencies and local governments. Her managerial experience encompasses military, domestic, commercial, and industrial sites in both urban and rural settings. As public interpretation specialist, she designed and executed a wide range of public information activities, including public participation programs for the Camden Yards Stadium and the Juvenile Justice projects in Baltimore; site brochures for the Drane House in Garrett County, Maryland and Icehouse Square in Gettysburg, Pennsylvania; display panels for the Main Street and Naval Academy sites in Annapolis, Maryland; permanent exhibit panels at the Army's Aberdeen (Maryland) Proving Ground; and a popular history of Fort Belvoir (Virginia). She also prepared two public information and training booklets and a training video for the Legacy Program of the Department of Defense.

Ms. Williams is actively involved with professional preservation organizations. She has served as Vice-President of the Archeological Society of Virginia (ASV), and continues to sit on its Board of Directors. Her publication credits include contributed articles in the *Yearbook* of the Historical Society of Fairfax County, *Museum News*, *Interpretation* (NPS), the *Quarterly Bulletin* of the ASV, *American Antiquity*, and the *Journal of Mid-Atlantic Archaeology*. In 1991, the Fairfax County History Commission presented her its Distinguished Service Award for her contributions to local history and preservation. The ASV also recognized Ms. Williams as "Professional Archeologist of the Year" in 1996. On the national level, the Society for Historical Archaeology recognized her service as Chair of that organization's Committee on Public Education in January, 2001, when she received the Society's Award of Merit for her contributions to archeological education.
