Acknowledgments

The development of the Alexandria Mobility Plan (AMP) would not be possible without the contributions from many individuals and organizations. The City thanks you for your dedication to the AMP development process.

Contents

Overview

Transit
The Transit chapter focuses on making transit more customer-friendly, reliable, and efficient to better serve existing customers and attract new ones.

Smart Mobility
The Smart Mobility chapter focuses on how the City can incorporate technology into the transportation network.

Streets
The Streets chapter seeks to identify ways to make City streets function better for all users, with the goal of making the street network more efficient and safer.

Supporting Travel Options
The Supporting Travel Options chapter focuses on how the City can support alternatives to driving alone through information, incentives, partnerships, and policies.

Curb Space and Parking
The Curb Space and Parking chapter focuses on how the City can use parking to help achieve its goals and manage competing demands for limited curb space.

Pedestrian and Bicycle
The Pedestrian and Bicycle chapter reflects the integration of the 2016 Pedestrian and Bicycle Plan Update into the format of the AMP, while tracking progress since 2016 and highlighting the remaining priorities.

Appendix I: Monitoring, Reporting, and Key Performance Indicators
Appendix II-A: Civic Engagement Process Summary
Appendix II-B: Civic Engagement Findings Summary
We are excited to share the draft Alexandria Mobility Plan (AMP) with you. As a growing city with a constrained street network, we face difficult challenges when it comes to how we move. The AMP puts Alexandria in a strong position to address our transportation challenges now and into the future by focusing on choice and giving you more and better choices for getting you where you want to go. An intentional effort for consistency between the visions of related plans, such as the City Strategic Plan, City Master Plan, and Environmental Action Plan, ensures we are meaningfully working toward citywide goals to support overall livability, equity, quality of life, and mobility for the community.

This plan was developed during the 2020 COVID-19 pandemic, which dramatically changed travel patterns and the way we live our lives. The AMP recognizes that there will always be unknowns and that the City must seek to understand potential scenarios and plan for flexibility, adaptation, and resilience.

Yon Lambert, AICP
Director, Department of Transportation and Environmental Services

The process to update and modernize the 2008 Transportation Master Plan led to thousands of interactions with Alexandrians from all backgrounds and neighborhoods, informing and educating us on community experiences, needs, and aspirations for the future of mobility. Overwhelmingly, we heard from you about the need to manage congestion and cut-through traffic, improve public transit, and make streets safe for all users. The AMP includes policies and strategies to mitigate the effects of regional traffic on our streets, make transit more convenient and accessible, consider all types of travelers from all parts of the community when designing our services and our streets—all in a way that promotes access and equity, getting you where you need to go safely and efficiently no matter which mode of transportation you use.

The release of the draft AMP does not mark the end of our collaboration. The advancement of the AMP, its policies, and its strategies in the years to come will require continued partnership with the community. With a shared vision and direction, we will work to meet our needs together with strategic decisions that will affect mobility in the city over the next decade.

Melissa McMahon
Chair, Transportation Commission
Setting the Stage

The Alexandria Mobility Plan (AMP) is a strategic update to the City’s 2008 Transportation Master Plan. By using the term “mobility,” this update emphasizes the importance of providing useful options to allow people to have the freedom to choose how to get around. The AMP is not a list of specific projects; instead, it lays out the policies and strategies that will guide transportation decisions for the next 10 years in pursuit of enhanced quality of life, sustainability, and equity, centered around the concept of choice.

Mobility vs. Transportation

On its most basic level, transportation is the simple act of moving people or goods from one location to another. Streets, sidewalks, buses, and trains are examples of infrastructure and options that help facilitate transportation, the existence of which alone does not equal mobility.

Mobility is about freedom of movement and having access to many transportation options, as well as the quality of those options to give you the ability to get you where you need to go. To have mobility is to have the ability to safely and affordably get to the places that enable a fulfilling and healthy life—jobs and opportunities, school, doctors’ offices, community centers, parks, and more.
Accomplishments Since 2008

The City has made great strides in realizing the vision of the 2008 Transportation Master Plan in the years since its adoption.1

**Streets Actions and Strategies**

S1. Ensure that streets safely accommodate all users
S2. Formally develop and adopt a “Complete Streets” Policy
S3. Develop new and enhance existing education programs to market and educate the public on travel demand management (TDM) strategies
S4. Improve mobility through development of a comprehensive policy for incorporating technology into transportation infrastructure
S5. Improve safety at signalized intersections
S6. Focus on improvements to natural and human environment, preservation of historic resources, and creation of enjoyable public spaces
S7. Develop a comprehensive design manual for City streetspace
S8. Explore opportunities to enhance the use of HOV lanes for periods of peak travel demand

**Parking Actions and Strategies**

P1. Complete a comprehensive study of City parking supply, demand, and parking policies
P2. Develop and implement guidelines and requirements for transit-oriented development (TOD) including max parking ratios, unbundled parking, and parking cash-out programs
P3. Ensure parking availability within the City’s commercial, residential, and tourist districts through the development of a curbspace management program
P4. Implement policies to discourage the development of surface parking lots
P5. Increase the use of information technology to provide real-time parking location and availability information
P6. Educate the property development and management community about unbundling parking from building leases
P7. Seek parking and transit solutions to minimize, if not eliminate, tour bus traffic in the residential areas of Old Town Alexandria

1. The 2008 Transportation Master Plan’s Pedestrian and Bicycle Concept Plans have been superseded by the City’s Pedestrian and Bicycle Master Plan to reflect changes that have occurred since 2008, including the Complete Streets policy, Capital Bikeshare program, and on-street bicycle facilities. The most recent biennial progress reports of project implementation can be found here.

The Route 1 Metroway between Alexandria and Arlington opened in 2014 and provides bus rapid transit (BRT)-style service with bus-only lanes along much of its route.

Alexandria’s Complete Streets Policy was adopted in 2011, and along with subsequent design guidelines and Vision Zero efforts, helps guide street improvements that enhance safety for all users.

Construction on the new Potomac Yard Metrorail Station between National Airport and Braddock Road on the Blue and Yellow lines began in 2019.
Shaping the Plan: Trends in Mobility

Several major forces are shaping how Alexandria is planning for its mobility needs now and into the next decade.

- Among the AMP’s core components is a recognition that not everyone who needs to travel in Alexandria has the same means, ability, or schedule.
- Population and employment growth both locally and across the region require that the City manage demand on local streets and provide a range of options for getting around to keep Alexandria a desirable place to live, work, and visit.
- Goals, targets, and actions of the Environmental Action Plan require that the City seek to minimize the carbon footprint of the transportation sector.
- Emerging technology provides new opportunities for addressing our mobility needs

Because the AMP is a concept-based strategic mobility plan, it is important to understand the factors shaping the mobility needs of the community and how the transportation network contributes to enhanced quality of life.

The COVID-19 pandemic, which was a prominent influence during the bulk of the AMP planning process, is likely to have many long-term impacts to transportation and mobility, such as increased rates of telework and more trips that occur outside of the traditional morning and evening rush hour. Despite this, it will continue to be important for cities to provide a wide range of mobility options, especially to ensure equity for their essential workers who do not have the luxury of telework and more often rely on public transit and other non-motorized modes of transportation. By focusing more on all-day trip-making, this plan is preparing the City for a likely “new normal” with potentially fewer commute trips and more trips throughout the day.

Planning for All

Alexandria is a diverse community with diverse needs

It is important that the City meet the needs of the Alexandria community, with intentional and focused attention to historically under-resourced communities in order to overcome existing disparities and achieve transportation equity. Of Alexandria’s citywide population:

- 16% of households have limited English proficiency
- 7% identify as having a disability
- 10% are below the poverty line
- 33% are persons of color
- 11% are aged 65 or older

Source: 2019 American Community Survey 5-Year Estimates, U.S. Census Bureau

Much of the transit network in the region—one of the major methods of combating traffic congestion—is centered around serving the commuting needs of 9-to-5 workers bound for the District of Columbia. Alexandria, however, has a significant population of workers with nontraditional work schedules who commute outside of the typical “rush hour.” Alexandria also has a sizeable population that does not have access to a car for work or nonwork trips that occur off-peak, when public transit is running less frequently or not at all.
A Growing Region

Alexandria plans for growth in transit-rich locations

In Alexandria and the region, residential population growth has been about 1.5% per year since 2010. This growth rate is expected to continue through 2030.

Employment in Alexandria is forecast to increase 1% per year through 2030.

The City routinely updates its Small Area Plans for specific neighborhoods that are anticipating growth and redevelopment. These community-driven plans outline neighborhood visions and provide guidance on levels and types of development. These planning efforts result in a concentration of diverse land uses and development density that will have access to existing and planned high-capacity transit hubs and corridors such as Metrorail stations and bus rapid transit (BRT) lines. This will minimize the impact of new development on the street network, thus creating opportunities for people to move using different travel choices rather than relying on automobile alone.

Major employers are choosing Alexandria for their growth and expansion, most notably in Potomac Yard and Oakville Triangle, near both the Route 1 Metroway transit corridor and the Potomac Yard-VT Metrorail station, and at Landmark Mall near both the Van Dorn Metrorail station and the planned West End Transitway corridor.
Transportation and the Environment

Transportation is the second-largest source of greenhouse gas (GHG) emissions in the region, most notably due to the use of private automobiles\(^2\)

Transitioning to an electric vehicle fleet is a major way to reduce the environmental impact of the transportation sector, particularly as the electric energy sector transitions to renewable energy. However, electric vehicles still present many of the adverse effects and risks of traditional vehicles, such as the need for costly, space-intensive, and environmentally unfriendly parking structures, traffic congestion, and crashes.

\[ 0.5\% \text{ of cars in Alexandria are electric.} \]

Alexandria residents are adopting electric vehicles at a faster rate than the national average — 6% versus 2% nationally.\(^3\)

The City and DASH are working to electrify their fleets and expand adoption of electric vehicles through a variety of measures identified in the Environmental Action Plan and the Electric Vehicle Charging Infrastructure Readiness Strategy.\(^4\) This plan supports those efforts by promoting enabling infrastructure, but focuses attention on improving mobility choices and safety.

The number of cars in Alexandria is growing, but at a rate that is proportional to population growth

While vehicle ownership is increasing in the city, it is on pace with overall population growth, with vehicles per capita holding steady in the past decade (0.60 cars per capita in 2019).

The percentage of zero-vehicle households has remained relatively steady since 2010 at between 9 and 10% of all households.

---

3. Alexandria Electric Vehicle Infrastructure Readiness Strategy, 2020

---

With new development near high-quality transit and improved mobility choices, more people may feel comfortable moving to Alexandria without a car or with fewer cars per household.
Technology Adoption

Advancements in technology are contributing to converging trends in mobility innovation and disruption

In the past decade, adoption of new technologies has led to significant changes in the ways people travel, navigate, and make choices. The result of these trends is an increasing demand for real-time information and on-demand services, prompting the growth of transportation network companies (TNCs) like Uber and Lyft, map-based and navigation mobile applications like Waze, and micromobility services like shared bicycles and scooters. Technology also has enabled our transportation infrastructure to be more connected, responsive, and automated with such innovations as adaptive signal technology that reacts to real-time traffic conditions. Future technology, such as autonomous vehicles, will have tremendous implications for traffic safety, roadway capacity, and general mobility.

Between 2011 and 2019, the percentage of adults in the U.S. who own a smartphone increased from 35 percent to 81 percent, with 96 percent of Americans owning a cell phone of any kind.

4 Pew Research Center, Mobile Phone Ownership Over Time, https://www.pewresearch.org/internet/fact-sheet/mobile/#:~:text=The%20share%20of%20Americans%20that,smartphone%20ownership%20conducted%20in%202011.
Related Plans and Policies

The AMP does not exist in a vacuum. Many City plans, programs, and initiatives contain transportation-related policies and goals that have been and will continue to be kept at the forefront of AMP implementation and citywide transportation planning, with AMP guiding principles at the core. The policies and strategies developed for this plan have been designed to support and advance these related policies and goals to achieve a cohesive citywide vision for the future.

Note: The plans shown in this example diagram are not an exhaustive list, with many applying to several additional guiding principles of the AMP.

The Plan-Making Process

The AMP process began in mid-2019 and occurred over four main phases. Together, this process and the input of the community informed the development of the AMP.

- **Phase I**: Community visioning process to identify desired outcomes and help shape the guiding principles that serve as the foundation for the AMP.
- **Phase II**: Public outreach and engagement activities to get input on what Alexandrians value and want to prioritize in how they travel.
- **Phase III**: Targeted outreach and engagement to develop community-generated ideas for solutions that could achieve the goals of the AMP. Ideas were further refined through community feedback to become policies and strategies.
- **Phase IV**: Community review of the draft plan before finalization and formal adoption.

Vision and Guiding Principles → Establish Priorities → Develop Policy and Strategy → Draft Plan

Public Outreach and Engagement Activities

PHASE I
- Visioning Survey
- Innovation Forum

PHASE II
- Community Champion Meetings
- Pop-Up Meetings

PHASE III
- Focus Groups
- Virtual Town Hall
- Public Feedback Form

PHASE IV
- Public Feedback Form
- Transportation Commission and AMPAC Meetings

Advisory Committee Meetings

How This Plan Will Be Used

The AMP will be used in a variety of ways to achieve its vision and guiding principles. First and foremost, this plan will serve as a workplan for the City to guide decision-making as it relates to transportation planning and design. With its strong ties to related City plans, targets, and policies, this plan also will help foster productive interdepartmental coordination across City agencies as strategies are advanced.

Having a strong planning document also makes Alexandria more competitive for a variety of grants and other funding sources and enables the City to advocate for legislative action at the Commonwealth government level. While this plan does not include individual projects, City staff will prioritize projects for grant applications based on the policies and guidance contained within the AMP. A well-thought-out plan and strong linkages to established guiding principles, policies, and strategies increases the City’s competitiveness in these funding and legislative policy pursuits, which will be critical to advance transportation planning, policies, and strategies.

In keeping with the overarching policy of adaptability and flexibility, it is important to note that the strategies within this plan are not exhaustive. As new initiatives develop, they will be considered compatible with the AMP as long as they are consistent with AMP policies and help to achieve its targets and guiding principles.

The Alexandria Mobility Plan Advisory Committee (AMPAC) provided continuous input to City staff throughout the entirety of the AMP process. AMPAC membership included representation from the Transportation Commission as well as other citywide bodies such as the Alexandria Chamber of Commerce, the Federation of Civic Associations, the Alexandria Commission of Persons with Disabilities, and the West End Business Association.
Public and Stakeholder Engagement

Developing a vision for mobility could not occur without an intentional and inclusive public process—one with a continuous and thoughtful approach to engaging the community and empowering stakeholders. A key principle of the AMP is an understanding of local dynamics, gained through a process of collaboration with and consensus of the community. Through this, the AMP is reflective of the local knowledge and lived experiences of Alexandrians, as well as the issues that they face now and expect to face in the future.

The planning process reached more than 48,000 Alexandrians, many of whom attended meetings, listened to presentations, participated in surveys, or submitted comments.

</tr>
</tbody>
</table>

These key engagement events yielded incredibly insightful public input that was critical in shaping the direction and content of this plan as well as important considerations for staff in plan implementation. The plan was shaped through a compilation of public input, information on trends and best practices, Interdepartmental Work Group and Advisory Committee discussions, and targets, goals, and policies from other City plans. Sentiments heard and lessons learned during the engagement process are included throughout the plan document, and a detailed engagement summary can be found in Appendix II – Civic Engagement Summary.

Pop-up events in late 2019 identified a range of community priorities and also helped spark conversation about major community needs.
Plan Elements
This plan is made up of several key elements that build upon each other.

**Plan Level**

- **Vision**
  What we want for Alexandria

- **Guiding Principles**
  Broad outcomes that we hope to achieve

- **Key Performance Indicators**
  Specific measures of our guiding principles

- **Overarching Policies**
  Methods to guide decision-making

**Chapter Specific**

- **Policies**
  Method to guide decision-making

- **Strategies**
  Specific and achievable initiative and/or project

- **Actions**
  Trackable step toward implementing a strategy

- **Metrics**
  Specific measures of our strategies

**Vision**
Safe, seamless, and connected mobility options foster a thriving Alexandria for all.
Guiding Principles and Measuring Progress

The guiding principles of the AMP represent the outcomes that the City hopes to achieve through improvements to transportation and mobility. All components of this plan seek to advance one or more guiding principles, which, when combined, will help foster ACCESS for Alexandria.

The City will track key performance indicators for each guiding principle through the life of this plan to understand how Alexandria as a whole is faring with regards to the specific outcomes that this plan seeks to achieve. To holistically track outcomes that address the equitable guiding principle, all KPIs are given an "equity lens" to measure progress in a way that is consistent with the City’s ALL Alexandria resolution and ensures equitable outcomes for all Alexandrians, especially neighborhoods and populations that have been historically underserved.

More detail on how the City plans to measure progress toward these principles, as well as chapter-specific metrics, can be found in Appendix I – Monitoring, Reporting, and Key Performance Indicators.

**Accessible**
Alexandria will work to make its transportation network easily accessible for users of all ages and abilities.

- **Key Performance Indicator:** Percent of residents in close proximity to alternatives to driving.
- **Equity Lens:** Percent of residents (low income, people of color, seniors, and persons with disabilities) in close proximity to alternatives to driving.

**Connected**
Alexandria’s transportation system will take you where you want to go seamlessly by leveraging technology and integrating transportation and land use.

- **Key Performance Indicator:** Percent of destinations that are connected to alternatives to driving.
- **Equity Lens:** Percent of low-wage jobs, Title 1 schools, and public health clinics that are connected to alternatives to driving.

**Convenient**
Alexandria will provide a transportation system with high-quality mobility options that are reliable, frequent, proximate, and comfortable.

- **Key Performance Indicator:** Percent of residents who say it is easy to get around.
- **Equity Lens:** Percent of residents (low income, people of color, seniors) who say it’s easy to get around.

**Equitable**
Alexandria acknowledges that there are disparities in neighborhoods and populations in the city that have been historically underserved. Alexandria will be targeted, inclusive, and intentional in addressing gaps in mobility options available, their quality, and safety.

- **Key Performance Indicator:** All guiding principles will be measured for the city as a whole and with an equity lens that examines how specific communities of greater need are faring with regards to the specific outcomes that this plan seeks to achieve.

**Safe**
Alexandria will eliminate all traffic deaths and serious injuries by 2028.

- **Key Performance Indicator:** Number of crashes, fatalities, and serious injuries.
- **Equity Lens:** Number of crashes, fatalities, and serious injuries within Equity Emphasis Areas.

**Sustainable**
Alexandria will prioritize low-carbon mobility options and reduce automobile dependency.

- **Key Performance Indicator:** Vehicle miles traveled and commute mode share and percent of commuters using alternative transportation options.
- **Equity Lens:** Percent of residents (low income, people of color, seniors, and persons with disabilities) in close proximity to alternatives to driving.
Overarching Policies

This plan includes the following overarching policies that will help guide the City’s decision-making and implementation efforts across all chapters as it works to advance the vision, guiding principles, and strategies. While the guiding principles are about the outcomes this plan seeks to achieve, these overarching policies speak to core methods for achieving these outcomes.

Apply An Equity Focus To All City Actions

Transportation has historically worked to worsen inequality by physically dividing neighborhoods and through disinvestment in low-income and minority communities. To ensure that transportation decisions in Alexandria not only prevent repeating past mistakes, but are used as a tool to lessen inequality, the City will apply an early and ongoing equity focus to all aspects of City projects, initiatives, programs, and services from conception through implementation. The City will use a framework that ensures policy decisions advance racial and social equity for all Alexandria residents.

Make Our Transportation Network Flexible And Adaptable

The City of Alexandria will strive to accommodate unforeseen external disruptions to our city (such as climate change, pandemics, and technological advancements) by building flexibility and resiliency into decision-making. The City will consider such uncertainties at the start of all its projects and identify ways to build in flexibility and adaptability through pilot projects, flexible contract mechanisms, and by prioritizing investments that make sense in a broad array of potential future circumstances.

Be Proactive And Data-Driven

The City of Alexandria will be proactive and data-driven in decision-making and when implementing projects and initiatives that advance plans and policies. While community requests and input are an important supplement for decision-making and implementation, time and resources are best—and most equitably—used for proactive decision-making based on data. It also will be important for the City to build and expand its resources and capabilities to process new data sources as they become available into the future.

Develop Partnerships That Advance Shared Goals

The City will develop partnerships with public and private organizations to extend the capabilities of staff and programs to advance shared goals in service of the community. Partnerships of this nature could be formed with regional bodies or neighboring jurisdictions, for example, to foster collaborative data sharing and technology advancement that will improve travel safety, reliability, and mobility for Alexandrians while giving the public more useful tools to make informed travel choices.
Transit

How the City supports improvements to bus, paratransit, and rail services by working to enhance transit options and access.
Introduction

A robust public transportation system has the potential to be a key ingredient to a successful community mobility strategy. The 2020 Alexandria Transit Vision Plan has provided a roadmap to achieve a future frequent, all-day bus network in Alexandria. This chapter will outline transit-supportive policies and strategies that will help the City achieve the 2030 vision of making bus service more convenient, customer-friendly, reliable, and efficient and will build upon the three transitway corridors established in the 2008 Transportation Master Plan.

This chapter also considers Metrorail, intercity and commuter rail, and paratransit (transportation for persons who are unable to use traditional bus and rail service) to strengthen critical links between Alexandria and the region.

“This [2030 proposed] network provides frequent, all-day transit service to 83 percent of people and 81 percent of jobs in Alexandria.”

– Alexandria Transit Vision Plan
Key Context

12
DASH bus routes, including the King Street Trolley

28
Metrobus routes

700+
bus stops

4
Metrorail stations*

*Alexandria’s fifth Metrorail station, Potomac Yard-VT, is expected to open in 2022.

12,800
average weekday DASH passengers in 2019

10,100
average weekday Metrobus passengers in 2018

28%
of Alexandria households use public transit at least once a week

This is less than in Washington, DC, and Arlington but above average for the region.

29%
of low-income residents

and 22%
of minority residents

are within walking distance of frequent, all-day transit

89% of low-income residents and 87% of minority residents will have access to frequent, all-day transit service with full implementation of the Transit Vision Plan

17%
of the Alexandria workforce is employed in sectors such as healthcare, food services, and hospitality

Limited midday, evening, and weekend DASH service means that many with non-traditional work hours or who are dependent on transit for other needs must find other options.

6
transit signal priority (TSP) corridors

King Street, Duke Street, Richmond Highway, Seminary Road, Van Dorn Street, and Beauregard Street

3
High-capacity transitway corridors identified in the 2008 Transportation Master Plan

Route 1 Metroway with bus rapid transit-style service between Alexandria, Arlington, and the new Potomac Yard Metrorail station; West End Transitway; and Duke Street Transitway

5. U.S. Census Bureau Longitudinal Employer-Household Dynamics (LEHD) 2018. Non-traditional work shift figures include “Accommodation and Food Services” and “Healthcare and Social Assistance” categories.

Planned developments such as INVOA’s new hospital at Landmark and ambulatory care center at Oakville Triangle will bring an influx of off-hour employees and visitors that would benefit from an expansion of frequent, all-day transit service.

1, 2. FY2026 DASH Transit Development Plan
3. 2017-2018 Regional Travel Survey, National Capital Region Transportation Planning Board, Metropolitan Washington Council of Governments
4. Alexandria Transit Vision Plan

4 | Transit
DOT Paratransit
DOT is the City of Alexandria’s specialized, Americans with Disabilities (ADA)-compliant transportation service for Alexandria residents and visitors who are unable or find it difficult to use transit buses or rail.

Discounted Fare Programs
Alexandria participates in the WMATA Senior SmarTrip Card program, providing discounted fares of $1.00 for passengers aged 65 and older on all DASH buses during off-peak hours. Additionally, disabled persons with valid Alexandria DOT or MetroAccess cards may board DASH buses for free.

Regional Coordination
Through the Northern Virginia Transportation Commission (NVTC), the WMATA Board, the Virginia Railway Express (VRE) Operations Board, and the Northern Virginia Transportation Authority (NVTA), City elected officials and staff seek to ensure that Alexandria’s interests are represented in regional transit funding and policy discussions. Alexandria and DASH staff coordinate with regional partners on topics such as regional corridor studies, seamless transit payments, and communication about regional service changes.
Policies

The Transit chapter policies will guide the City's decision-making around investments that will enhance ease of use, improve customer-friendliness, and increase ridership of transit.

**Policy A: Make transit greener and more useful**

Build out a fast and reliable all-day transit network with frequent service that runs on electric buses and serves the entire city, with a focus on areas that will benefit the most Alexandrians, businesses, employees, customers and visitors. Per the Transit Vision Plan, the City is prioritizing route improvements in areas that will generate more ridership and better serve transit-dependent populations. The City will continue to prioritize service enhancements and initiatives in these areas, while ensuring that there are transit options citywide.

**Policy B: Make transit easier to use**

Increase transportation choices by reducing or eliminating barriers to taking transit. To increase transit ridership, the City of Alexandria will be proactive and intentional in working to make transit simpler, less expensive, and more convenient.

The City of Alexandria and DASH are in the process of analyzing the use of electric buses for their fleet. Recently, DASH has made significant progress towards electrification and was awarded $5.1 million for the purchase of six battery-electric buses and associated charging infrastructure in 2019. Additional improvements and upgrades at the DASH facility will continue to support the operation of the new electric buses and advancement towards full electrification.

**Strategies That support policies**

1: Build out the city's priority transitway corridors and an all-day transit network with frequent service using electric buses
2: Identify improvements on congested, high ridership corridors to make buses faster and more reliable
3: Improve the rider experience
4: Make paying for the bus easier and more equitable
5: Support a better-connected regional transit network
6: Modernize the paratransit program for the city’s aging population
Strategies

Strategy 1. Build out the city’s priority transitway corridors and an all-day transit network with frequent service using electric buses

Actions

- Extend the dedicated transit lanes along the Route 1 Metroway corridor to provide a connection to the new Potomac Yard Metrorail station and into Arlington.
- Advance the design and construction of the West End Transitway and continue to evaluate and improve as needed.
- Collaborate with the community to develop a design for Duke Street that enables the construction of the Duke Street Transitway.
- Seek funding for the operations and capital improvements necessary to implement the improvements recommended in the Transit Vision Plan.

Addressing the Need

The City is planning for future growth around the urban edges of Alexandria, which will increase demand for high-quality, high-capacity transit.

Alexandria has made progress on the three transitway corridors, but there is still work to be done.

To make the system more useful for everyone and to have the greatest likelihood to increase ridership, a more frequent, all-day network will be important.

Advancing City Plans and Goals

Alexandria Transit Vision Plan
- 2030 Vision Plan Network

Environmental Action Plan 2040
- Improve and Expand Low Carbon Options such as Transit, Bikes, and Walking

City Strategic Plan
- Multimodal Component and Goals

A transitway (also known as a busway or bus rapid transit) is a high-quality bus-based transit system that delivers fast, frequent, comfortable, and cost-effective service. With dedicated lanes or preferential treatment on streets, a transitway can contain features similar to a light rail or metro system with greater reliability and speed, avoiding traffic-related delays that typically slow down regular bus service.
Strategy 2. Identify improvements on congested, high-ridership corridors to make buses faster and more reliable

Actions
- Evaluate transit signal priority, queue jumps, high-occupancy vehicle (HOV) lanes, and other operational or street design improvements on corridors with frequent and congested bus service (beyond the designated transitways).
- Consider near-term pilot projects for speed and reliability improvements on high-use corridors in advance of full implementation.

Addressing the Need
Many people do not use the current transit system because it is often slow and unreliable.

Those who take the bus reduce the number of vehicles on the roadway, yet are stuck in the same traffic as everyone else; unlike Metrorail, which operates in its own right-of-way.

Advancing City Plans and Goals
Alexandria Transit Vision Plan
- 2030 Vision Plan Network

Environmental Action Plan 2040
- Improve and Expand Alexandria’s Public Transit System

Age Friendly Plan For A Livable Community
- Provide Safe, Reliable, and Frequent Transit
Strategy 3. Improve the rider experience

Actions

• Ensure all bus stops are fully accessible per the Americans with Disabilities Act (ADA) and consider opportunities to improve access to bus stops through better sidewalk, bicycle, and ramp connections.

• Expand implementation of bus stop amenities including shelters, real-time signage, seating, lighting, and natural amenities to improve comfort and safety.

• Stay up to date with real-time tracking and bus priority technology to enable easier and more reliable trip planning and vehicle tracking for riders.

• Build in options for storage of large items such as strollers or groceries and enact policies to encourage families to use transit.

• Upgrade the existing fleet and change fleet specifications on future bus orders to improve the health, safety, and comfort of drivers and passengers during the COVID-19 pandemic and beyond, including driver partitions, air flow improvements, and real-time notifications of bus crowding levels.

Addressing the Need

The opportunity exists to enhance the transit journey—not just while riding, but during route planning, waiting at bus stops, and transferring between routes.

As indicated during AMP focus group meetings, integrated mobile applications and/or signs with real-time information are in high demand and would give users confidence in opting for transit.

Traveling to and waiting at bus stops is often expressed as a concern, especially among elderly and female riders. Greater investment in bus stop amenities such as shelters and lighting—including sidewalks and bike lanes that connect to bus stops—will help improve the transit journey for existing and future transit riders.7

Advancing City Plans and Goals

Alexandria Transit Vision Plan
• Capital Improvements, Bus Replacement, and Fleet Expansion

Environmental Action Plan 2040
• Improve and Expand Alexandria’s Public Transit System

Smart Mobility Framework Plan
• Install Information Displays at Bus Stops

Age Friendly Plan For A Livable Community
• Provide Safe, Reliable, and Frequent Transit

---

Strategy 4. Make paying for the bus easier and more equitable

Actions

- Evaluate options for revising the DASH fare structure that reduce cost barriers for low-income populations.
- Coordinate with regional partners on assessing, designing, and implementing next-generation payment options, including mobile ticketing, contactless payment, and off-board fare collection.

The Transit Ridership Incentive Program (TRIP)—managed by the Virginia Department of Rail and Public Transportation (DRPT)—is a new statewide grant program dedicated to improving transit's regional connectivity in urban areas with a population in excess of 100,000 and reducing barriers to transit use by supporting low-income and zero-fare programming.

Addressing the Need

For some, fares present a financial obstacle to using transit. For example, more than 30 percent of Alexandria Metrobus riders have an annual household income of less than $30,000.8 This obstacle makes it more expensive to access regional jobs and services.

A 2020 grant from the Metropolitan Washington Council of Governments (MWCOG) to analyze different fare structures that benefit low-income riders will inform the City's plans for changes to fare structure.

Advancing City Plans and Goals

Alexandria Transit Vision Plan
- Increasing Transit Access for Low-Income Alexandrians

Environmental Action Plan 2040
- Improve and Expand Alexandria’s Public Transit System

8. Metrobus Ridership Survey, 2018
Strategy 5. Support a better connected regional transit network

Actions

- Ensure that mobile payment systems are compatible between Washington Metropolitan Area Transit Authority (WMATA), Virginia Railway Express (VRE), Maryland Area Rapid Commuter (MARC), and Alexandria Transit Company (DASH) services.
- Enhance connections to support future expansion of passenger rail service, water transportation, and regional bus rapid transit corridors.
- Collaborate with WMATA and neighboring jurisdictions to enhance connectivity to major regional activity centers.

Several ongoing initiatives are examining the possibility of making expanded commuter and intercity rail options a reality in the future. The realization of “regional” or “through-running” rail (i.e., trains from Virginia that travel to Maryland without requiring a transfer at Washington Union Station and vice versa) holds the potential to better connect Virginia with Washington, DC, Maryland, and beyond, unlocking new access to jobs and opportunities across the region.

Addressing the Need

Demand for travel is not restricted to individual city, county, or state boundaries, especially in the Washington metropolitan region. A better-connected regional transit network will meet the need of travelers to get to more destinations across the region in a seamless, efficient, and convenient manner.

Advancing City Plans and Goals

*Environmental Action Plan 2040*

- Improve and Expand Alexandria’s Public Transit System
Strategy 6. Modernize the paratransit program for the city’s aging population

Actions
- Understand data and trends shaping paratransit needs.
- Develop more customer-friendly service that is scalable for increased demand.
- Identify opportunities to improve cost-effectiveness for long-term program sustainability.
- Explore partnerships with existing City services, neighboring jurisdictions, and on-demand service providers to improve the effectiveness and efficiency of the program.

Addressing the Need
Paratransit programs have not changed considerably over the last 10 years. These programs are costly and will only get more expensive as the number of elderly and disabled residents are anticipated to increase.

There are opportunities to make the programs more efficient while improving the customer experience.

Paratransit provides transportation services under the ADA to individuals with disabilities that prevent them from being able to use traditional transit routes or vehicles. DOT is the City of Alexandria’s specialized paratransit program that provides services to qualified passengers to help them get where they need to go. In an average month, the City’s DOT paratransit program provides about 5,500 rides.

Advancing City Plans and Goals
Age Friendly Plan For A Livable Community
- Provide Safe, Reliable, and Frequent Transit
- Communication About Programs and Services Available to Older Alexandrians and Adults with Disabilities
# Metrics

The strategies and policies in this chapter are intended to move the needle on the following measurable metrics:

<table>
<thead>
<tr>
<th>Metric</th>
<th>Target or Directionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percent of residents within ¼ mile of 15 minute or better service</td>
<td>❯ Increase</td>
</tr>
<tr>
<td>Percent of low-income, people of color, and senior residents within ¼ mile of 15 minute or better service</td>
<td>❯ Increase</td>
</tr>
<tr>
<td>Percent of residents who say it is easy to get around by transit</td>
<td>❯ Increase</td>
</tr>
<tr>
<td>Percent of people taking transit to work (mode share)</td>
<td>❯ Increase</td>
</tr>
<tr>
<td>Annual transit ridership</td>
<td>❯ Increase</td>
</tr>
<tr>
<td>DASH on-time performance</td>
<td>❯ Increase</td>
</tr>
<tr>
<td>Rating of ease of travel by public transportation (Resident Survey) *</td>
<td>❯ Increase</td>
</tr>
</tbody>
</table>

* The Alexandria Resident Survey reports results based on race/ethnicity, income, and age in addition to all residents.
Smart Mobility

How the City incorporates technology into the transportation system.
Introduction

Smart mobility is a broad term that incorporates the application of technology to streets, traffic signals, vehicles, parking systems, and other transportation infrastructure to make them more efficient and safe, while providing data that can help improve long-term decision making about where and what changes to make to our streets. In the coming decade, converging innovations and technology are likely to play a transformative role in transportation. Given the limited ability to expand the street network, smart mobility initiatives will be instrumental in improving traffic flow. Alexandria's 2018 *Smart Mobility Framework Plan* describes a range of efforts that the City is taking to prepare for and incorporate technology into its transportation assets. Through these efforts, the City is working to lay the groundwork for future technology that will help better manage traffic on local streets.
Key Context

250+ traffic signals

200 of which are 'connected' for central monitoring and control

5 corridors with transit signal priority (TSP) and emergency vehicle preemption (EVP) installed

TSP and EVP allows vehicles such as buses, fire trucks, and other emergency vehicles to get through traffic signals quicker, keeping buses on schedule and improving response times for emergency vehicles.

1. Smart Mobility Framework Plan, 2018
2. Smart Mobility, City of Alexandria, https://www.alexandriava.gov/SmartMobility.html
Existing Programs, Policies, and Initiatives

Smart Mobility Program
Alexandria’s Smart Mobility program represents an investment in the future of transportation. The City is actively creating infrastructure for future advancements, such as autonomous and connected vehicles, which will make traveling by car, bus, bike, and foot faster, more efficient, and safer than ever. While the City is laying the foundation for innovations that may be 20 years into the future, some are just 5 to 10 years away—and some, such as real-time travel information collection and technologies that help emergency vehicles reach people faster and buses stay on schedule, are already in place. To date, the City has installed more than 145,000 feet of fiber-optic cable, 27 traffic cameras, and 30 smart traffic sensors. These investments ensure that Alexandria is at the forefront of a global movement to make cities as connected, innovative, and smart as possible.

Fiber-Optic Cable
The laying of fiber-optic cable is a key initiative of the City’s intelligent transportation system (ITS) initiative. The resulting fiber-optics network will become a conduit of real-time communications—linking traffic signals, weather stations, and other devices with the Traffic Management Center (TMC). These updates will allow the City to better manage and respond to delays and incidents, plan for special events, share critical alerts and data to better inform the public, and support new mobility technologies as they come online.

Passive Optical Networks
The City of Alexandria recently conducted a pilot project using Passive Optical Networks (PON) for traffic signal control. PON is a technology developed by cable companies to connect fiber-optic networks to homes and is much less expensive and easier to maintain than traditional signal control technology. The PON pilot was a success, and the City is deploying this technology through its ITS Integration Phase III and IV projects. Alexandria is one of the first municipalities in the country to use this technology.
Policies

The Smart Mobility chapter policies will guide the City’s decision-making around technology improvements that will make streets safer, more efficient, and prepared for the future.

Policy A: Improve safety and efficiency

Use technology to manage congestion for safe and efficient city streets and protect the character of neighborhoods.

In the past, cities have relied on physical infrastructure such as pavement markings, curbs, and signage to manage their transportation networks. As transportation moves into a new digital age, it is critical to incorporate technology and data into management practices. The City of Alexandria will apply technology to its streets, traffic signals, transit vehicles, and other transportation infrastructure to help make the best and most efficient use of our streets.

Policy B: Prepare for new technology

Plan proactively and flexibly to ensure cost-effective investment in technology that can improve travel choices.

By taking a forward-looking approach, the City of Alexandria will position itself to keep pace with rapidly advancing technology and lay the groundwork for integrating future technologies. Planning flexibly will enable the City to adapt to the latest technologies as they continue to evolve.

Strategies
That support policies

1. Expand smart signal technology to enable detection and real-time signal adjustments
2. Strategically invest in partnerships to expand city data, technology, and communications capabilities
3. Upgrade capabilities of the traffic management center to better manage congestion in real-time
4. Accommodate connected infrastructure and vehicles
5. Develop a framework for pilot projects to test new modes, infrastructure, or initiatives

Credit: C. Davidson for Visit Alexandria
Strategies

Strategy 1. Expand smart signal technology to enable detection and real-time signal adjustments

Addressing the Need

By installing signal technology that can respond and adapt to real-time vehicle location and movement data, the City can meet the need to manage traffic flow and move more people, transit, and emergency vehicles faster and safer while avoiding costly changes to the roadway network.

The City’s Adaptive Traffic Signal Control project aims to install smart detection equipment on traffic signals to respond to real-time conditions. This effort will optimize traffic flow, decrease delays, and reduce stops at intersections to help traffic move better on arterial streets and reduce traffic on local streets.

Advancing City Plans and Goals

Smart Mobility Framework Plan

- Install Intelligent/Adaptive and Traffic Responsive Traffic Signal Systems and Install TSP and EVP Equipment on Signals
- Install TSP and EVP Equipment on Buses and Fleet Vehicle

Vision Zero Action Plan

- Improve Data Collection and Evaluation

Actions

- Integrate transit signal priority (TSP) and emergency vehicle preemption (EVP) into more of the City’s corridors. This involves upgrading the City’s traffic signals as well as the fleet of transit and emergency vehicles with preemption equipment.
- Expand the use of vehicle detection at signals for more responsive timing through adaptive signal technology.
- Improve data collection through new platforms and technologies to better understand how people use the transportation system and improve decision making.
Strategy 2. Strategically invest in partnerships to expand city data, technology, and communications capabilities

Addressing the Need

Partners are often needed to help expand a city’s data, technology, and communications capabilities. Partnerships with nearby jurisdictions also allow for increased regional collaboration on shared operational issues.

There is an increasingly large amount of data that can be generated from public-private partnerships. Processing and understanding this data requires a shift in thinking, more data analytics capabilities and resources, and increased collaboration.

Advancing City Plans and Goals

**Smart Mobility Framework Plan**

- Facilitate Data Exchange and Integrate Real-Time Data into Decision-Making Model

Alexandria has joined the WAZE for Cities Program, enabling access to more detail and more residents access to information about traveling in the City. Source: Waze
Strategy 3. Upgrade capabilities of the Traffic Management Center to better manage congestion in real-time

Actions
- Equip Alexandria’s Traffic Management Center (TMC) to allow it to manage on-street traffic equipment, monitor overall system status including pavement condition during weather events, configure devices remotely, and analyze data.
- Incorporate resiliency and redundancy measures, such as a virtual backups in the event of failures.
- Expand coverage of CCTV cameras and improve traffic visualizations for more efficient management of traffic incidents.

Addressing the Need
As Alexandria grows and technology changes, the TMC will require greater capabilities to control signal timing and phasing, dispatch and track City vehicles, and monitor real-time conditions and incidents. These increased capabilities will allow the City to better manage and respond to delays and incidents, plan for special events, share critical alerts and data to better inform the public, and support new mobility technologies as they come online.

Advancing City Plans and Goals

Smart Mobility Framework Plan
- Upgrade TMC, Facilitate Data Exchange, and Create Automated Interactive Maps
- Increase Coverage of CCTV
- Expand Network of Weather Sensor Stations / Pavement Sensor Technology

AMP Guiding Principles
- Safe
- Accessible
- Connected
- Equitable
- Sustainable
- Convenient
Strategy 4. Accommodate connected infrastructure and vehicles

Actions

- Prepare for connected vehicles by developing maintenance and infrastructure plans to ensure street readiness.
- Consider pilot projects to lay the groundwork for and evaluate the effectiveness of various new technologies.
- Ensure that safety is a priority when testing and implementing new technologies.

Addressing the Need

Advancements in vehicle technology are happening quickly, and the City needs to be well-positioned to prepare for and adapt to these changes. It is important to prepare for connected vehicle technology through strategic investments that accommodate vehicle-to-infrastructure and vehicle-to-vehicle communications, which will help travelers find parking spaces, avoid traffic and crashes, navigate hazardous conditions, and more.

Advancing City Plans and Goals

Smart Mobility Program (20-Year Goals)

- Accommodate Self-Driving Vehicles and Connected Vehicles
- Accommodate Vehicle-To-Infrastructure Communications
- Accommodate Vehicle-To-Vehicle Communications
Strategy 5. Develop a framework for pilot projects to test new modes, infrastructure, or initiatives

Actions

- Create standards for appropriate use of pilot projects, including timeframes, public process, evaluation, and opportunities to make adjustments.
- Build upon lessons learned from the Dockless Mobility Pilot as well as national best practices from peer cities.
- Promote a framework that ensures transparency in pilot project execution.

A pilot project is a small-scale, preliminary project or test that is conducted to evaluate feasibility, cost, effects, and improvements prior to the implementation of a full-scale or more expensive, resource-intensive project.

To date, transportation and smart mobility pilot projects have taken many forms in Alexandria, such as Passive Optical Networks (PON) for traffic signal control, testing of shared bicycles and scooters (Dockless Mobility Pilot), conversion of on-street parking to sidewalk extensions (Parklet Pilot Program), and testing zero-emissions hydrogen fuel cell bus technology.

Addressing the Need

Flexible planning and a standard, citywide framework are needed as new mobility options and technologies become available to ensure Alexandria is testing them with consistency, transparency, and a focus on equity.

Advancing City Plans and Goals

**Smart Mobility Framework Plan**

- Improve Accessibility, Plan for Emerging and Future Transportation Technologies

**Environmental Action Plan 2040**

- Adopt Permanent Regulations for Shared Mobility Devices Such as Dockless Bikes, Electric Scooters, and Other Personal Mobility Devices by Fiscal Year 2023
Metrics

The strategies and policies in this chapter are intended to move the needle on the following measurable metrics:

<table>
<thead>
<tr>
<th>Metric</th>
<th>Target or Directionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of intersections with smart signal technology</td>
<td>▲ Increase</td>
</tr>
<tr>
<td>Percent of intersections with smart signal technology or transit priority signals in Equity Emphasis Areas</td>
<td>▲ Increase</td>
</tr>
<tr>
<td>Rating of traffic flow on major streets (Resident Survey) *</td>
<td>▲ Increase</td>
</tr>
</tbody>
</table>

Equity Emphasis Areas were developed by the Metropolitan Washington Council of Governments (MWCOG) using tract-level Census data to identify communities that have significant concentrations of low-income and/or minority populations. For more information, see Appendix I - Monitoring, Reporting, and Key Performance Indicators.

* The Alexandria Resident Survey reports results based on race/ethnicity, income, and age in addition to all residents.
Streets

How the City designs and manages its streets.
Introduction

The streets of Alexandria are a limited public resource that must support multiple functions and serve many types of users including people who drive, walk, take transit, bike, or ride scooters. While other chapters address walking, biking, transit, and how technology can make our streets safer and improve traffic flow (smart mobility), a major focus of this chapter is on how the City will manage streets to prioritize local travel, improve safety, reduce congestion and cut-through traffic, and ensure that all users are considered in decisions surrounding our streets.

This chapter incorporates two major existing City policies that recognize that streets serve a variety of users and that all need to be accommodated safely: the Complete Streets policy and Design Guidelines—related to how we design our streets for all users—and the Vision Zero Policy and associated Vision Zero Action Plan, which takes a multifaceted, data-driven approach to eliminating serious travel-related injuries and fatalities.

This chapter does not duplicate these efforts, but attempts to advance them, while seeking to address concerns related to excessive traffic on local streets.
Key Context

37
average number of people killed or seriously injured each year using Alexandria’s streets

60-80%
of traffic on arterial streets in central Alexandria is just passing through

During peak travel periods, major streets experience their greatest amount of delay resulting in driver frustration and a diversion of traffic to local streets.

560 miles
of travel lanes

Source: City data, 2021

2,300
intersections

34%
of Alexandrians have a positive view of traffic flow in the city

In the 2020 Resident Survey, respondents gave lower marks to traffic flow, car travel, overall ease of travel, public parking, and traffic enforcement compared to 2018. The rating for traffic flow is the lowest ranking since the survey began in 2016.

576 miles
of sidewalks

3. Alexandria Resident Survey, 2020
Existing Programs, Policies, and Initiatives

Several of the related City plans and programs introduced in the Overview chapter contain targets and policies that relate to streets. The goals and targets in the City Strategic Plan call for continued emphasis on multimodal street design to improve ease and safety of getting around by all modes.

The Complete Streets Policy and the Vision Zero Policy and Action Plan responded to needs identified in the 2008 Transportation Master Plan and are now integrated into the Alexandria Mobility Plan (AMP).

Complete Streets Policy and Design Guidelines

The 2011 Complete Streets Policy directed planners, engineers, and developers to evaluate streets for safety and consider design elements and operational practices to enable safe access for all users, regardless of age, ability, or mode of transportation.

In 2016, the Alexandria Complete Streets Design Guidelines were published. The Guidelines are a resource for City departments, design professionals, and developers and communicate expectations regarding the design of the city’s public and private streets.

Vision Zero Policy and Action Plan

Alexandria established a Vision Zero policy in 2017 with the goal of zero traffic deaths and serious injuries by 2028. By establishing the policy, the City recognizes that traffic deaths and serious injuries are preventable through proper engineering, enforcement, evaluation, and education.

The 2018 Vision Zero Action Plan is updated every year and identifies high-crash intersections that are priorities for safety improvements. The Action Plan lists the steps the City will take to improve data collection and evaluation; enhance City processes and collaboration; build safe streets for everyone; and promote a culture of safety.

Street Maintenance

Repaving Program

City streets are resurfaced based on their physical condition. When streets are resurfaced, City staff identify priority locations to improve safety, accessibility, and mobility by making changes such as upgrading curb ramps, adding missing crosswalks, installing bike lanes, upgrading high-priority crossings, and repairing sidewalks.

Street Cleaning and Snow Removal Program

The City’s Street Cleaning program is responsible for street sweeping, leaf collection, and snow removal. This program maintains clean and accessible streets for all street users based on seasonal changes.
The Streets chapter policies will guide the City’s decision-making around programs and improvements that will reduce and mitigate the effects of cut-through traffic, improve safety, and leverage technology on City streets.

**Policy A: Protect neighborhoods from cut-through traffic**

Reduce cut-through traffic burdening City neighborhoods. The City will pursue a multifaceted approach to reduce neighborhood cut-through traffic that burdens Alexandrians who live on, work on, or use local city streets. Through this pursuit, the City will work to balance the needs of local traffic and regional connectivity.

**Policy B: Achieve Vision Zero**

Use data to eliminate traffic-related deaths and serious injuries by 2028. An average of 37 people in Alexandria are killed or seriously injured each year using the City’s streets\(^4\). These injuries and deaths are preventable. The City will prioritize the use of data—particularly crash, crash risk, and traffic safety data—in decision-making to eliminate serious injuries and fatalities. A proactive, data-driven approach will provide transparency and equity when developing priorities, processes, and making decisions.

**Policy C: Leverage smart mobility**

Recognizing that driving is important in the City, use smart mobility to manage congestion and neighborhood safety. Through the application of Alexandria’s Smart Mobility Framework Plan, the City will apply technology to streets and leverage data to better manage traffic, enhance safety, and increase its understanding of how the street network functions to improve quality of life in Alexandria.

**Strategies**

That support policies

<table>
<thead>
<tr>
<th>Strategies</th>
<th>Policies</th>
</tr>
</thead>
<tbody>
<tr>
<td>1: Develop a comprehensive program to reduce speeding and cut-through traffic on local streets</td>
<td>A: Protect neighborhoods from cut-through traffic.</td>
</tr>
<tr>
<td>2: Ensure new development does not overburden the street network</td>
<td>B: Achieve Vision Zero.</td>
</tr>
<tr>
<td>3: Work with regional, state, and private sector partners to develop tools to keep traffic on highways and reduce regional cut-through traffic</td>
<td>C: Leverage smart mobility.</td>
</tr>
<tr>
<td>4: Implement the Vision Zero Action Plan to eliminate traffic fatalities and serious injuries by 2028</td>
<td></td>
</tr>
<tr>
<td>5: Consider the use of speed cameras and other automated tools to improve safety</td>
<td></td>
</tr>
</tbody>
</table>

Strategies

Strategy 1. Develop a comprehensive program to reduce speeding and cut-through traffic on local streets

Actions
- Outline procedures for addressing cut-through traffic, traffic congestion, and speeding.
- Develop criteria and list of data needs tailored to each traffic issue.
- Identify specific solutions for local traffic appropriate for the street type and location to encourage regional traffic to stay on major thoroughfares.

Addressing the Need

Congestion and cut-through traffic are significant issues in Alexandria. During outreach conducted in the summer and fall of 2019, 71 percent of respondents cited congestion as the biggest challenge for the future of mobility in Alexandria.

Forty-two percent of traffic in central Alexandria is trips that originate and end outside of Alexandria. Less regional traffic on local streets may improve safety and the quality of life for residents and can help local traffic move more efficiently.

Advancing City Plans and Goals

City Strategic Plan
- Ease of Getting to Places

Complete Streets Policy and Design Guidelines

Smart Mobility Framework
- Traffic Management

Vision Zero Action Plan
- Build Safe Streets for Everyone

Strategy 2. Ensure new development does not overburden the street network

Actions

- Update guidance for developers to better reflect City goals through traffic impact studies and best practices from around the country.
- Ensure proper consideration of all users through improved methods for measuring service levels and safety impacts on our transportation network.
- Encourage study methodologies and mitigation measures that place higher priority on local trips rather than regional trips to help reduce cut-through traffic.
- Require improved data collection and reporting after implementation.

Addressing the Need

Requiring excessive new roadway capacity for new developments can attract even more traffic, further increasing congestion and posing a threat to safety.

Current traffic study practices for new developments focus on vehicle delay (expressed by “Level of Service”) but fail to consider impacts on other street users.

Advancing City Plans and Goals

**Age Friendly Plan for a Livable Community**
- Safe Walking, Biking, and Driving

**Complete Streets Policy and Design Guidelines**

**Environmental Action Plan 2040**
- Reduce VMT, Green Building

**Vision Zero Action Plan**
- Enhance City Processes and Collaboration, Build Safe Streets for Everyone
Strategy 3. Work with regional, state, and private sector partners to develop tools to keep traffic on highways and reduce regional cut-through traffic

Addressing the Need

Congestion and cut-through traffic are significant issues in Alexandria and many jurisdictions in the region. During outreach conducted in the summer and fall of 2019, 71 percent of respondents cited congestion as the biggest challenge for the future of mobility in Alexandria.

Forty-two percent of traffic in central Alexandria is trips that originate and end outside of Alexandria. Coordination of efforts and resources with regional, state, and private sector partners is needed to address regional cut-through traffic.

Alexandria’s transportation network is linked to a complex regional network with multiple jurisdictions, transit operators, and statewide entities, making close coordination critical.

Advancing City Plans and Goals

**Smart Mobility Framework Plan**
- Optimize Traffic Flow, Improve Travel Times, Reduce Congestion

**City Strategic Plan**
- Distinctive and Vibrant Neighborhoods, Multimodal Transportation

Actions

- Utilize variable messaging systems to use real-time travel comparisons to promote high-occupancy toll (HOT) lanes.
- Evaluate pricing strategies that promote highway travel versus travel on local streets.
- Coordinate with other jurisdictions facing these issues to support and lobby for strategies that will make travel on highways more efficient.
- Explore signal timing as a tool to keep regional traffic on highways.

---

Strategy 4. Implement the Vision Zero Action Plan to eliminate traffic fatalities and serious injuries by 2028

Actions

• Continue to develop annual work plan priorities for promoting a culture of safety, building safer streets, improving data collection, and enhancing City processes and collaboration.

• Prioritize high crash intersections and corridors for improvements, especially those in Equity Emphasis Areas.

• Utilize crash data in each project to enhance data-driven decision-making.

• Apply national best practices as appropriate.

Addressing the Need

Between 2016 and 2020, 21 people were killed and 144 people were seriously injured while traveling on Alexandria’s streets.

In addition to the life-altering impacts of these crashes, the perceived danger of being involved in a crash keeps many people from walking and biking, which limits the City’s ability to achieve a wide range of goals including reducing traffic congestion and greenhouse gas emissions.

61% of respondents would ride bikes more and 57% would walk more if they felt safer from traffic.6

More broadly, crashes contribute to travel delays and negatively affect the reliability of the transportation system.

Advancing City Plans and Goals

**Age Friendly Plan for a Livable Community**

• Safe Walking, Biking, and Driving

**Vision Zero Action Plan**

• Build Safe Streets for Everyone

**Complete Streets Policy and Design Guidelines**

Strategy 5. Consider the use of speed cameras and other automated tools to improve safety

Actions

- Consider speed cameras in school zones, enabled in 2020.
- Pursue legislative measures to further expand the use of camera enforcement.
- Partner with the Alexandria Police Department to enforce traffic laws to protect vulnerable street users and promote equity.

Automated Enforcement Using Cameras. Legislation passed in the summer of 2020 allows state and local police in Virginia to use speed cameras near highway construction zones and school zones.

Addressing the Need

Decades of unequal transportation investments and exclusionist planning policies mean that many vulnerable populations live on or near poorly designed roadways where crashes are more likely to occur, increasing their likelihood of being involved in a crash. There is a need to balance these safety disparities with a better understanding of human bias in enforcement.

Human bias in traffic enforcement has resulted in the deaths of Black and brown people during routine traffic stops. Automated enforcement is one strategy to help reduce this human bias.

In 2020, the League of American Bicyclists and Safe Routes Partnership, two prominent organizations in the field of traffic safety, removed “enforcement” from their program frameworks. The League found that “enforcement as a stand-alone traffic safety tactic is not particularly effective in achieving long-term safety outcomes,” and supports the use of alternatives to police-led traffic enforcement. Automated enforcement is one alternative, along with street design improvements and educational diversion programs.

Advancing City Plans and Goals

City Strategic Plan

- Inclusive City, Safe and Resilient Community

Vision Zero Action Plan

- Improve Data Collection and Evaluation, Promote a Culture of Safety

ALL Alexandria

- Target equitable enforcement efforts
### Metrics

The strategies and policies in this chapter are intended to move the needle on the following measurable metrics:

<td>Rating of ease of travel by car (Resident Survey) *</td>
<td>Increase</td>
</tr>
</tbody>
</table>

* The Alexandria Resident Survey reports results based on race/ethnicity, income, and age in addition to all residents.
Supporting Travel Options

How the City encourages alternatives to driving alone.
Introduction

This chapter focuses on how the City can support alternatives to driving alone through information, incentives, partnerships, and policies to reduce congestion on our streets and make our transportation system more sustainable. These practices—often called Transportation Demand Management (TDM)—are not about disincentivizing driving or forcing people out of their cars, but rather making a variety of transportation options (i.e. transit, carpool, telework, cycling, and walking) easy, accessible, and convenient to give more travel choices to more people.

The development of this chapter was called for in the Environmental Action Plan (EAP) 2040 to improve the City’s existing programs that support travel and mobility options to help achieve EAP and City Strategic Plan goals for reducing vehicle miles traveled in the City and increasing the share of biking, walking, and transit trips.

By FY2023, develop a stand-alone Transportation Demand Management Chapter in the Alexandria Mobility Plan (formerly the Transportation Master Plan) to promote low-carbon modes of transportation.

– Short-Term Action 7.2.1, Environmental Action Plan 2040
Key Context

74% of trips in Alexandria are non-work trips\(^1\)

59% of trips in Alexandria are less than three miles\(^1\)

46% of commute trips in Alexandria are single-occupancy vehicle (SOV) trips\(^1\)

36% of carbon emissions in Alexandria are produced by transportation, making transportation the second-largest emissions-producing sector\(^2\)

4 | Supporting Travel Options
Existing Programs, Policies, and Initiatives

GO Alex
The City’s GO Alex program provides residents, commuters, and employers with resources to help promote mobility options through:

- Developing employer-specific plans and resources
- Assisting in rideshare matching
- Promoting regional incentives to try different transportation options
- Providing travel tools and information across Alexandria

The policies and strategies in this chapter aim to support GO Alex by improving and expanding the reach of its programming to make more people more aware of Alexandria’s wide range of travel choices.

Transportation Management Plans
A transportation management plan (TMP) is a site-specific plan to encourage residents and employees to take public transportation, walk, bike, or share a ride as opposed to driving alone to reduce rush hour congestion. Developers of new buildings are required to submit a TMP that outlines how they will reduce drive alone trips and report back to the City.

In 2021, there are approximately 65 active TMPs in the City. TMPs help achieve efficient and sustainable use of transportation facilities by providing bikeshare memberships, transit passes, and information to residents and workers.
Policies

The Supporting Travel Options chapter policies will guide the City’s decision-making around increasing availability and encouraging use of flexible and sustainable travel options for all types of trips.

Policy A: Enhance choice

Make it easier for more people to choose an alternative to driving alone.

The City of Alexandria will apply evidenced-based practices that have been demonstrated to be the most effective at reducing drive-alone travel to reduce congestion, improve public health, and make the city more sustainable.

Policy B: Promote work flexibility

Encourage continued telework and flexible schedules to reduce congestion and emissions.

Teleworking and modified work schedules can help shift travel times and alleviate traffic congestion during peak periods. The City of Alexandria will work to encourage broader telework and flexible schedule practices among employers to reduce demand on the transportation network during peak periods.

Policy C: Focus on all trips

Shift non-commute trips away from driving alone.

Outreach and education regarding travel options is traditionally focused on commute-to-work trips, despite the fact that non-commute trips make up two-thirds of all trips in Alexandria. The City of Alexandria will work to better understand how to expand mobility options for all travelers, whether they are traveling for school, errands, shopping, recreation, tourism, or other reasons. Reducing dependence on driving not only helps manage congestion, but also promotes a healthier and safer Alexandria. With the potential for long-term shifts in travel and commuting patterns during the COVID-19 pandemic and beyond, considering all types of trips is important.

Strategies That support policies

1: Use information, programs, and encouragement to make it easier for residents and workers to choose options other than driving alone

2: Use the Potomac River to expand transportation options

3: Create mobility hubs of travel options and charging infrastructure

4: Pursue regional approaches to reduce traffic and congestion, particularly during peak times
Strategies

Strategy 1. Use information, programs, and encouragement to make it easier for residents and workers to choose options other than driving alone

Actions

- Identify community influencers who can help encourage alternatives to driving alone.
- Expand use of real-time information to promote travel choices.
- Develop a travel training program to provide hands-on experience on taking a new (to you) way of traveling.
- Update the Transportation Management Plan program so new developments can better reduce congestion.

Addressing the Need

Only 20 percent of Alexandrians are aware of GO Alex, the City’s program that works to encourage the use of public transit, ridesharing, bicycling, and walking as money- and time-saving alternatives. To increase the use of the variety of travel options available in Alexandria, it is important that people know about the program.

It is important that information on travel options—such as transit, bikeshare, car share, and rideshare—is available in one place so travelers can make informed decisions about which they choose.

Improved guidelines for developers can produce more and better-quality data on how new developments are impacting travel patterns and promoting multimodal options.

Advancing City Plans and Goals

Environmental Action Plan 2040

- Reduce Automobile Dependency and Educate Individuals and Employers on Mobility Options Other Than Single-Occupancy Driving
- Increase the Share of All Trips Taken by Public Transit, Walking, and Biking by at Least 15 Percent by 2023

City Strategic Plan

- Increase the Percentage of Commuters Using Alternative Transportation Options

Travel training refers to the practice of teaching people to travel independently on different modes of transportation, such as public transit. Travel training programs are intended to encourage behavior changes by giving people a level of comfort with and understanding of travel options that are new to them. These programs can be offered in a group setting or one-on-one and also can be specialized for seniors or people who have cognitive or physical mobility challenges.

3. AlexMoves – City of Alexandria Mobility Survey, 2019
Strategy 2. Use the Potomac River to expand transportation options

Actions
- Partner with other jurisdictions, agencies, and private partners to determine the best ways to utilize the Potomac River as a transportation option.
- Explore and evaluate new water transportation routes and services for commute and trips, errands, or entertainment.
- Identify opportunities to integrate with other modes of transportation.

Addressing the Need
There is a need to provide enhanced transportation options and transit connections, especially those that do not impact the city's constrained street network, to make progress toward key environmental priorities such as reducing vehicle miles traveled.

As noted during AMP focus group meetings, the Potomac River is an underutilized transportation resource in the region and using it for new travel options could be an effective means of providing alternatives to driving and alleviating congestion.

During the WMATA Platform Improvement Project in the summer of 2019 that shut down Metrorail service in Alexandria, the Potomac Riverboat Company began offering new morning commuter service from Old Town Alexandria to The Wharf in Washington, DC. This new ferry travel option was well received among those who opted for it and did not cause increased traffic or parking challenges at the waterfront. This strategy will explore ways to build upon the success of that experiment.

Advancing City Plans and Goals

Environmental Action Plan 2040
- Reduce Vehicle Miles Traveled (VMT)
Strategy 3. Create mobility hubs of travel options and charging infrastructure

**Actions**

- Develop a scalable framework to accommodate a range of sizes of mobility hubs and electric vehicle charging infrastructure in strategic locations around the City. These mobility hubs should incorporate elements to improve navigation for all users of the site through wayfinding and other features.

- Take care to focus on traditionally underserved communities and strategic locations to address first- and last-mile travel needs citywide.

**Addressing the Need**

There is a need to better serve the city—especially areas with more limited transit service—with smaller-scale and more cost-effective travel options that offer alternatives to driving for getting to transit hubs or other short trips. Mobility hubs also provide convenient choices for which modes to use depending on the length and purpose of your trips.

A mobility hub is a location that brings multiple modes of transportation together in one physical location and are often clustered near high-frequency transit stations such as a Metrorail station. Typical mobility hub components include bicycle and scooter parking, electric vehicle chargers, carshare vehicles, and pedestrian wayfinding signage.

**Advancing City Plans and Goals**

**Smart Mobility Framework Plan**

- Improve and Expand Mobility on Demand as a Means to Improve Accessibility
- Plan for Emerging and Future Transportation Technologies

**Environmental Action Plan 2040**

- Adopt Permanent Regulations for Shared Mobility Devices such as Dockless Bikes, Electric Scooters, and Other Personal Mobility Devices by Fiscal Year 2023
Strategy 4. Pursue regional approaches to reduce traffic and congestion, particularly during peak times

Actions

- Advocate for policies that will help manage congestion, such as telework incentives or a regional congestion pricing program.
- Continue to support regional transportation initiatives, including Commuter Connections, and targeted TDM initiatives of a regional scale, such as the Northern Virginia Regional Multi-Modal Mobility Program (R3MP).
- Coordinate with neighboring jurisdictions and regional entities to explore unifying local TDM programs into a more comprehensive regional effort.

Addressing the Need

Vehicle miles traveled (VMT) - a measure of how much people are driving - in Alexandria was reduced by 12 percent between 2010 and 2018 mostly due to travel on local streets. However, regional travel has not changed significantly and represents an equal proportion of VMT on City streets. With Alexandria generally bordered on two sides by I-395 and I-495, City streets can be used as cut-through or alternative routes, especially during congested periods. It is important that Alexandria continues to coordinate with regional partners to pursue efforts that will manage transportation demand to further decrease VMT and, thereby, reduce congestion and carbon emissions.

The Northern Virginia Regional Multi-Modal Mobility Program (R3MP) leverages “the collaborative use of real-time data by Virginia’s public and private sectors to improve travel safety, reliability, and mobility and to give the public the tools to make more informed travel choices.” The program includes elements such as data-exchange programs, commuter parking information systems, dynamic incentivization, artificial intelligence-based decision support system, and a multi-modal analytical planner. The program advances the use of technology to support jurisdictions and cities to achieve their goals of increasing modal splits and a more dynamic, safe, and efficient transportation system.

Advancing City Plans and Goals

Environmental Action Plan 2040

- Reduce Automobile Dependency and Educate Individuals and Employers on Mobility Options Other Than Single-Occupancy Driving

City Strategic Plan

- Increase the Percentage of Commuters Using Alternative Transportation Options

</tr>
<tr>
<td>Number of community influencers involved with GO Alex</td>
<td>Increase</td>
</tr>
</tbody>
</table>
Curb Space and Parking

How the City regulates parking and manages curb use.
Introduction

This chapter is focused on how the City will manage competing demands for curb space and efficiently use parking to help achieve City goals. Over the past several years, Alexandria has seen an increase in e-commerce deliveries, rideshare use, and scooter and bikeshare use, all of which have unique demands for space along the curb. During the 2020 COVID-19 pandemic, there also has been an increasing interest in allowing retail uses and outdoor dining along the curb, which may continue into the future. The evolving nature of the curb and broader mobility trends prompt a need for the City to think differently about how it allocates this resource and effectively manages demand to maintain order on our streets and ensure that various needs are being met.

Managing curb space must also consider effective management of off-street parking. The policies and strategies set forth in this chapter will help guide the management of Curb space and parking resources and concurrently support the City’s commitment to sustainability and quality of life.
Key Context

126 unique on-street paid parking zones with space for more than 1,400 vehicles across the City. These zones are largely concentrated in Old Town. Street parking generally costs less than parking garages, which disincentives garage use and puts a great strain on street parking.

16 publicly accessible garages and 6 parking lots available for paid parking in Old Town. These facilities range in cost, typically featuring flat and hourly rates that cost more than metered street parking.

58% Alexandrians that have a positive experience with “Availability of parking near my home.”

52% Alexandrians that have a positive experience with “Availability of on-street and garage parking.” Ratings for traffic flow, travel by car, overall ease of travel, and public parking among Alexandrians decreased in 2020 compared to 2018.

1. Alexandria 2020 Resident Survey
Existing Programs, Policies, and Initiatives

Residential Parking Permit Program
Alexandria’s Residential Parking Permit (RPP) program designates certain areas in the city as residential permit parking districts. As a means to preserve on-street parking in these areas for Alexandria residents, the RPP ordinance prohibits on-street parking for more than two or three hours during varying time periods. Only persons who maintain their residence within the boundaries of an RPP district are eligible to obtain parking permits, and vehicles that display these permits are exempt from the timed restrictions.

Electric Vehicle Charging
The Electric Vehicle Charging Infrastructure Readiness Strategy will develop a roadmap to anticipate the electric vehicle charging infrastructure needs of City residents, workforce members, and visitors as electric vehicles become more mainstream. The project includes:

- Evaluating projections for current and future electric vehicle charging infrastructure needs
- Recommending locations for publicly accessible charging infrastructure with integration into a broader regional electric vehicle charging infrastructure network
- Recommending charging infrastructure and hardware options; business ownership and operations models; and maintenance solutions
- Reviewing the City’s zoning, codes, permitting, and inspection codes and development processes and requirements to recommend updated, or new, language to promote and anticipate electric vehicle charging needs
- Recommending policies, approaches, and synergies for locating electric vehicle charging infrastructure at businesses, multi-unit dwellings, single-family homes, right-of-way, and other locations
Policies

The Curb Space and Parking chapter policies will guide the City’s decision-making around smart use of curb space and making parking more efficient and available toward the advancement of City goals.

Policy A: Connect parking policy to City goals

Achieve broader City goals related to sustainability, congestion, and housing affordability through parking.

Parking facilities are expensive to build and maintain, and when it is easy to park, more people will drive. The goals of the Environmental Action Plan to reduce vehicle miles travelled and increase the use of sustainable travel modes require the City to reimagine the curb space. The City of Alexandria will continue to use policy to unbundle the cost of parking from housing in order to reduce the cost burden of parking on non-vehicle owners and limit its role in contributing to traffic.

Policy B: Ensure parking availability

Ensure parking is available in the city’s residential and commercial districts.

By strategically managing curb space for its highest and best use and co-managing off-street and on-street parking, the City will seek to ensure a reasonable parking option is available, recognizing that some people may need to walk a short distance to their destinations.

A recent study has demonstrated that in an urban area more parking led to more car ownership, more driving, less transit use, and less walking.2

Policy C: Promote equitable allocation of curb space

Treat all curb space as a public asset that should be allocated in an equitable manner for its highest and best use, appropriate for the specific location, time of day, and time of year.

Recognizing the competing demands and challenge of feeling personal ownership over curb space, the City of Alexandria will work to manage this finite resource in a way that considers a diversity of needs and maximizes community benefits and goals. Local context will drive decision-making to ensure that solutions for the curb space use are tailored to needs.

Strategies

1: Implement a prioritization framework for making changes to curb space

2: Consider pricing, regulation, data, and communications to manage parking availability

3: Reconsider standards for parking requirements in new developments

Strategies

Strategy 1. Implement a prioritization framework for making changes to curb space

Actions

- Implement a framework to prioritize parking, loading, drop-off, bike lanes, and mobility hubs, among other uses, when making curbside changes.
- Work with the community and the Traffic and Parking Board to apply the framework when a new use is considered on a street.

Addressing the Need

Alexandria’s curb space is a valuable commodity and is very much in demand. Many modes of access—pedestrians, parking, transit, bicycles, and commercial and private vehicles—compete for curbside access to shops, restaurants, housing, offices, and community facilities. The City must find a way to balance these needs while encouraging the use of off-street parking and loading when appropriate to reduce the demand for the curb.

Advancing City Plans and Goals

**Environmental Action Plan 2040**
- Reduce Automobile Dependency and Educate Individuals and Employers on Mobility Options Other Than Single-Occupancy Driving

**Complete Streets Policy and Design Guidelines**
- Accommodate All Modes of Travel and for the Health and Safety of All Users
- Smart and Efficient Management of the Curbside

**Age Friendly Plan for a Livable Community**
- Those Who Walk, Drive, and Ride a Bicycle in Alexandria Can Do So Safely

**Housing Master Plan**
- Preserve the Long-Term Affordability and Physical Condition of the Existing Stock of Publicly Assisted Rental Housing, as well as Market Rental Housing Where Affordability Commitments Can Be Secured
Curb Space Prioritization Framework

As part of the AMP, the City has begun the work to realize Strategy 1 and develop a curb space prioritization framework. This framework outlines varying priorities for curb uses in areas of the city, depending on their land use. Staff will use this framework to guide future decisions.

This framework sets priorities for curb access based on land uses. Land uses are broadly defined into four categories based on the kinds of curbside activity in different parts of the City.

Curb uses are also categorized broadly to enable future mobility options to fit in to this framework. For example, previous plans mentioned bus stops, but did not anticipate bikeshare systems, dockless scooters, or ridehail companies like Uber and Lyft.

This framework can be applied to existing streets as well as future streets outlined in small area plans.

When evaluating proposals and resident requests that will impact curb space, staff will work through the framework with affected parties to understand the needs and context of the street. This framework helps guide decision-makers when evaluating requests and applications—it is not a proposal for changing the City’s streets.

- The specific context for each block matters. If a proposal is not feasible on a given street, this framework would not apply.
- Not every curb use category will apply to every street. For example, low-density residential streets with available curb space will not need large (or any) changes to provide adequate access for people.
- Higher priority uses will not eliminate lower priorities. Providing access for goods, for example, does not mean that all the parking on a street will be eliminated, but instead that a parking space may be considered for removal to introduce improved access for goods.

<table>
<thead>
<tr>
<th>Land Use Categories</th>
<th>Description:</th>
<th>Examples:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential</td>

</thead>
<tbody>
<tr>
<td>Priority: High</td>
</tr>
<tr>
<td>Access for People</td>
</tr>
<tr>
<td>Access for Goods</td>
</tr>
<tr>
<td>Activation</td>
</tr>
</tbody>
</table>
Strategy 2. Consider pricing, regulation, data, and communications to manage parking availability

**Actions**

- Consider coordinated pricing strategies to encourage more efficient and equitable use of on- and off-street parking spaces.
- Consider technology to collect and disseminate more and better data on parking availability and usage.
- Improve signage and availability of real-time information via technology to guide users to off-street parking, pick-ups, drop-offs, and loading to free up on-street curb space whenever reasonable and practicable.
- Improve the perception of safety in garages through improved communications, wi-fi connections, and cellular service.

**Addressing the Need**

The perception that parking is hard to find in certain areas, while not always a reality, can lead to frustration and encourage drivers to circle the block to find available spaces or free parking. By making off-street parking more attractive through pricing or improved information, more people may use it, freeing up on-street spaces and reducing the perception that parking is in limited supply.

**Advancing City Plans and Goals**

*Environmental Action Plan 2040*

- Reduce Automobile Dependency and Educate Individuals and Employers on Mobility Options Other Than Single-Occupancy Driving

Credit: Misha Enriquez for Visit Alexandria
Strategy 3. Reconsider standards for parking requirements in new developments

**Actions**

- Leverage the ability of new data sources to regularly evaluate parking uses and trends.
- Build upon recent efforts to right-size parking for residential and commercial development, recognizing that increased parking leads to increased traffic.
- Eliminate barriers to sharing parking supply between different buildings and uses. For example, a bank that closes 5:00 PM and a restaurant that opens at 5:00 PM may be able to share parking facilities.

**Addressing the Need**

Parking facilities have several adverse effects on the natural and built environments, including increased stormwater run-off and pollution due to their impervious surfaces; reduced density of land development that hinders the use of sustainable travel options such as walking, biking, or public transit; and increased use of vehicles that can lead to more traffic congestion and air pollution. It is important to reconsider parking standards and requirements to reduce the number of parking facilities that may be larger than necessary.

Updating parking standards can yield several positive outcomes for communities. Maximum standards for off-street parking work to limit the construction of parking facilities that are larger than necessary. Historically, local governments have practiced setting parking *minimums* in development regulations to ensure that there is sufficient off-street parking space based on location, building use, and building size, which has resulted in reduced economic activity, among other negative outcomes. Recently, cities such as Hartford, CT and Portland, OR recognized the need to limit parking and established parking *maximums* in their regulations, thus controlling the amount of land and impervious surface associated with parking.

**Advancing City Plans and Goals**

**Housing Master Plan**
- Preserve the Long-Term Affordability and Physical Condition of the Existing Stock of Publicly Assisted Rental Housing

**Environmental Action Plan 2040**
- Reduce Automobile Dependency

**City Strategic Plan**
- Increase the Percentage of Commuters Using Alternative Transportation Options
### Metrics

The strategies and policies in this chapter are intended to move the needle on the following measurable metrics:

<table>
<thead>
<tr>
<th>Metric</th>
<th>Target or Directionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rating of ease of public parking (Resident Survey) *</td>
<td>Increase</td>
</tr>
<tr>
<td>Number of on-street bikeshare stations, scooter corrals, and parklets introduced per the Curbspace Prioritization Framework</td>
<td>Increase</td>
</tr>
</tbody>
</table>

* The Alexandria Resident Survey reports results based on race/ethnicity, income, and age in addition to all residents.
Pedestrian and Bicycle

How the City is making it easier and safer to walk and bike.
Introduction

Previous investments in sidewalks, on-street bike lanes, trails, and education and encouragement programs have made Alexandria one of a few communities in the region to be recognized as both a Silver-level Walk- and Bicycle-Friendly Community. Implementing the policies and strategies in this chapter will help the City achieve Gold-level certification and improve the travel experience for everyone in Alexandria.

This chapter incorporates the 2016 Bicycle and Pedestrian chapter updates of the 2008 Transportation Master Plan and subsequent policies and initiatives called for in that effort, namely Vision Zero and the Complete Streets Policy. These policies will continue to shape how the City makes it easier and safer for people walking and biking.

### 2016 Pedestrian and Bicycle Plan

**Pedestrian Chapter**
- Goals – Safety, Engineering, Encouragement, Education
  - Objectives
    - Strategies – Engineering, Programs, and Policy

**Bicycle Chapter**

(2016 Goals/Objectives)

**Strategies**
(2016 Objectives/Strategies)

Note: Corresponding objectives from the 2016 Pedestrian and Bicycle Plan are noted next to actions within each strategy of this chapter.

---

1. Walk Friendly Communities - http://walkfriendly.org/communities/
2. Bicycle Friendly Communities - https://bikeleague.org/bfa/awards#community
Key Context

59%

of trips in Alexandria are less than three miles

Short trips like these are amenable to biking, walking, or transit when safe, convenient, and accessible routes are provided.¹

5%

of Alexandria residents walk or bike to work

This is higher than the statewide average of 3%, and higher than Arlington’s 4%; however, it is lower than Washington, DC’s 18%.⁴

Walking is the third most used travel mode on a typical weekday after personal car use and travel by Metrorail.⁵

“Safe and comfortable places to walk and bike” was one of the top four priorities cited during public engagement in fall 2019.⁶

Over 50%

Alexandria residents that walked or biked for transportation in the past month

An even greater percentage walked, ran, or biked for recreation or fitness.⁷

Perceptions of walking vary by community. Public comments indicated that Old Town, “revolves around walking, while in Arlandria the city “does not do much to support walking.”

576 miles

of sidewalks

21 miles

of on-street bike lanes

23 miles

of paved trails

The paved trails provide full separation from motor vehicles and serve transportation and recreational purposes for a wide range of users of all ages and abilities.

37

Capital Bikeshare stations

with plans to add several more in the next few years

63

pedestrian-involved crashes in 2019⁸

13

bicycle-involved crashes in 2019

Safety for people walking and bicycling needs improvement.⁸

3. 2017-2018 Regional Travel Survey, National Capital Region Transportation Planning Board, Metropolitan Washington Council of Governments
4. American Community Survey 2019 5-Year Estimates
5. 2017-2018 Regional Travel Survey, National Capital Region Transportation Planning Board, Metropolitan Washington Council of Governments
6. AMP Priority Feedback, 2020
8. Vision Zero Performance Dashboard
Existing Programs, Policies, and Initiatives

Complete Streets
Alexandria's complete streets program works to implement the City's priority pedestrian and bicycle projects as identified in the 2008 Transportation Master Plan and 2016 Pedestrian and Bicycle Plan and in accordance with the Vision Zero policy and Action Plan.

Repaving Program
City streets are resurfaced based on their condition rating. When streets are resurfaced, City staff identify areas where planned portions of the pedestrian and bicycle network can also be implemented by upgrading curb ramps, adding missing crosswalks, installing bike lanes, repairing sidewalks, and more to improve conditions for users of all ages and abilities.

Safe Routes to School
Alexandria City Public Schools employs a Safe Routes to School (SRTS) Coordinator to facilitate safety programs and organize walking and biking events and at all elementary and middle schools. Additionally, Transportation and Environmental Services (T&ES) has a dedicated SRTS infrastructure planning and construction program as part of the Complete Streets Program.

Multi-Use Trails
Alexandria's trail system features over 20 miles of paved, off-street, multi-use trails throughout the city, offering safe and enjoyable connections to key destinations for users of all ages and abilities. The City continues to expand the trail network by adding new trails and extending existing trails.

Bicycle Parking
The City of Alexandria is working to increase the number of both short- and long-term bicycle parking spaces. Bicycle parking is usually installed at the request of citizens or businesses. Additionally, the City requires bicycle parking as new development occurs in the city.

Shared Mobility
Capital Bikeshare, the regional bikeshare program, is expanding rapidly into the City of Alexandria. With 37 stations in Alexandria and more on the way, Capital Bikeshare is a convenient way of traveling by bike that can be used by residents and visitors alike. The City has also launched a pilot program to allow private companies to operate shared, dockless bicycles and scooters available for rent.

Walking and bicycling infrastructure benefit more than just those who walk or bike. For example, new mobility options, such as bikeshare or scooters, benefit from bicycle infrastructure on the road. Sidewalks that are Americans with Disabilities Act (ADA) accessible—have smooth surfaces, adequate width, and curb ramps on all corners—help not only those using mobility devices such as wheelchairs, but also those using strollers and wheeled luggage.
The Pedestrian and Bicycle chapter policies will guide the City’s decision-making around building out a citywide network of safe and connected sidewalks, bike lanes, and trails.

Policy A: Prioritize Safety

Focus on vulnerable street user crashes to help achieve Vision Zero.

The City will focus on crashes involving vulnerable street users, including those who walk and bike, as a means of achieving Vision Zero.

Policy B: Address Network Gaps

Complete pedestrian and bicycle networks equitably and cost-effectively.

The City will complete the bicycle and pedestrian networks by pursuing funding for priority projects, accelerating work in underserved areas, and taking advantage of opportunities to make improvements through the repaving program.

Strategies

That support policies

1: Create a safe, well-maintained, and comfortable walking and bicycling environment

2: Build out a continuous, connected, and accessible pedestrian network that enables people of all ages and abilities to move safely and comfortably

3: Build out a connected bicycle network of both on- and off-street facilities to benefit cyclists of all ages and abilities

4: Upgrade or install infrastructure that increases the accessibility of City streets and public spaces for people of all ages and abilities

5: Educate all street users about safety and traffic laws

Policies

The City of Alexandria will...
Strategies

Strategy 1. Create a safe, well-maintained, and comfortable walking and bicycling environment

Actions

• Prioritize safe access to transit, schools, senior centers, recreation centers, and improvements at high-crash locations. (PS9, PS10)

• Invest in ongoing maintenance and repair of the pedestrian and bicycle network. (BS6)

• Conduct construction inspections, address priority lighting deficiencies, and ensure timely snow plowing to ensure infrastructure is accessible at all times. (PP3)

• Improve signage and wayfinding for people biking and walking. (PS7, BS8)

Addressing the Need

There is an increasing demand for safe and comfortable walking and bicycling facilities, as reflected in the Resident Transportation Needs survey the City conducts every two years. In 2016, 51 percent of the respondents indicated they would walk or bike more if there were more off-street walking, biking, or multi-use paths. In 2018, this increased to 66 percent of respondents.9

The safety of people walking and biking is a serious concern. From 2016 to 2019, pedestrian-involved crashes accounted for 30 percent of the serious injury and fatal crashes in the City of Alexandria. Nine pedestrians were killed and eight bicyclists were seriously injured during the same time frame.10

Advancing City Plans and Goals

Age Friendly Plan For A Livable Community

• Pedestrian-Safe Streets

Environmental Action Plan 2040

• Prioritize Low-Carbon Mobility Options

• Reduce Vehicle Miles Traveled (VMT)

Vision Zero

• Build Safe Streets for Everyone

Note: Corresponding objectives from the 2016 Pedestrian and Bicycle Plan are noted next to actions.

10. Vision Zero Performance Dashboard
Strategy 2. Build out a continuous, connected, and accessible pedestrian network that enables people of all ages and abilities to move safely and comfortably

Actions

- Complete the priority sidewalks to ensure sidewalks on both sides of all major streets and on at least one side of all other streets. (PS2, PS2.1)
- Make the existing sidewalks and intersections safer and more comfortable, with a focus on high-crash locations per the Vision Zero Action Plan. (PS5, PS2.2)
- Reduce conflicts between modes by implementing treatments consistent with national best practices that are context appropriate, including increasing the number and quality of off-street connections and intersection improvements. (PS7, PS8, BS3, BS4, P&B1.1, P1.3, P2.2, P&B2.3)
- Improve off-street pedestrian access through neighborhoods, new developments, and across major barriers such as freeways or rail corridors. (PS4-5, PS2.3 PSP11)

Addressing the Need

While nearly all Alexandria residents have easy access to sidewalks in their neighborhoods, 10 percent live within 330 feet of a sidewalk gap. There are sidewalk gaps present within 330 feet of three Alexandria City Public Schools. Sidewalks are essential for transit access and can support a number of commercial and social activities as well, such as outdoor dining and sidewalk vendors.

Advancing City Plans and Goals

Age Friendly Plan For A Livable Community
- Pedestrian-Safe Streets

Environmental Action Plan 2040
- Prioritize Low-Carbon Mobility Options
- Reduce vehicle miles traveled (VMT)

Vision Zero
- Build Safe Streets for Everyone

Note: Corresponding objectives from the 2016 Pedestrian and Bicycle Plan are noted next to actions.
Strategy 3. Build out a connected bicycle network of both on- and off-street facilities to benefit cyclists of all ages and abilities

Actions

• Build out the planned bicycle network with both on- and off-street facilities to provide safe connections within and between neighborhoods and to key destinations. (BS1, BS2)

• Seek to build upon the planned network of bicycle routes to develop a citywide network of low-stress bicycle routes that are appealing to adults and children who are interested in riding but concerned about safety. (Also in EAP; BS2, B2.2)

• Integrate the off-street trail system with the on-street bicycle network by providing wayfinding and well-designed transitions at trail access points. (BS3, BS4, PS7, BS8)

• Expand bikeshare and availability of parking for bikes and micromobility devices such as shared/electric bikes and scooters. (BS5, BS9)

Addressing the Need

Currently, 54 percent of the population lives within 1/8 mile of a bike lane or paved trail; however, the network of these types of facilities is not continuous.

For those wanting to bike to work, 62 percent of jobs in the city are within 1/8 mile of a bike lane or paved trail.

To improve the bike network for people of all ages and abilities, the City must build more off-street trails and on-street bike lanes with more separation from motor vehicles. These facilities also can be used by scooters and other types of micromobility vehicles.

Micromobility (Capital Bikeshare, Lime, Bird, etc.) provides users with on-demand access to bicycles, mopeds, and/or scooters at a variety of pick-up and drop-off locations for travel. About two-thirds of Alexandrians indicated that they would walk and/or bike more if there were more off-street multi-use paths or trails.11

Advancing City Plans and Goals

Environmental Action Plan 2040
• Prioritize Low-Carbon Mobility Options
• Reduce Vehicle Miles Traveled (VMT)

Vision Zero
• Build Safe Streets for Everyone

Age Friendly Plan For A Livable Community
• Safe Walking, Biking, and Driving

Note: Corresponding objectives from the 2016 Pedestrian and Bicycle Plan are noted next to actions.

Strategy 4. Upgrade or install infrastructure that increases the accessibility of City streets and public spaces for people of all ages and abilities

Actions

- When repaving streets, upgrade corners and add high-visibility crosswalks where appropriate with accessible, directional ramps that meet, to the maximum extent possible, current ADA standards. (PS3, PS9)
- Upgrade or install new audible pedestrian signal push buttons at existing and new pedestrian signals to enhance access and safety for persons with disabilities. (PS3)
- Address tripping hazards on sidewalks and pedestrian areas as quickly as possible through routine maintenance projects and in response to service requests. (PS6)
- Prioritize safe and accessible access to transit stops, schools, and parks. (PS9, PB7)
- Install appropriate street lighting for those walking and bicycling, with consideration to areas with more people of color or low income residents.

Addressing the Need

According to the US Census, 11 percent of Alexandria’s population is aged 65 and older, 5 percent of the population under the age of 65 lives with a disability, and 17 percent of the population under the age of 16 lives with a disability. Providing safe, comfortable, and accessible walking and biking routes is particularly important for members of these groups and others who may not or cannot drive a personal vehicle. These routes provide opportunities for physical activity and independent travel.

Advancing City Plans and Goals

Age Friendly Plan For A Livable Community
- Safe Walking, Biking, and Driving

Complete Streets Policy and Design Guidelines
- Accommodate All Modes of Travel
- Health and Safety for All Users

Vision Zero Action Plan
- Build Safe Streets for Everyone

Note: Corresponding objectives from the 2016 Pedestrian and Bicycle Plan are noted next to actions.

12. Demographic and Housing Estimates, American Community Survey 1-Year Estimates, 2019
Strategy 5. Educate all street users about safety and traffic laws

Actions

- Initiate targeted outreach that aims to increase adult and youth knowledge of safe walking, biking, and driving behaviors and traffic laws related to pedestrian, bicycle, and scooter travel. (4.1)

- Pursue partnerships to expand the reach of education, outreach, and promotional efforts with GO Alex, the Alexandria Policy Department, Alexandria City Public Schools, local advocacy groups, and others. (BP6, BP11, BP12, BP13; PP6, PP8, PP9, PP10)

- Educate public and private sector design professionals, city groups, and the public who are involved with Alexandria's transportation system on Complete Streets principles and design. (BP10)

Existing education programs commonly focus on a single mode (for example, driver’s ed or a “learn to ride” bicycle safety class) and may not fully address how different modes should interact on the street. Virginia law states that drivers must give at least three feet of space when passing a person riding a bike. If there is not three feet of passing space in the shared travel lane, the driver must change lanes to pass. This can be hard to judge, and people riding bikes may not always be riding far to the right in order to avoid opening car doors and other obstacles.

One way to address these challenges is through better education for all road users. Frustrated by low attendance at adult bike safety classes, the City of Fort Collins, Colorado re-branded their class for drivers and saw attendance triple in the first year. The 90-minute Bicycle-Friendly Driver class covers:

- Why sharing the road is the safest alternative for both drivers and bicyclists
- What’s legal and what’s not legal, for both drivers and bicyclists
- Common crashes and how to avoid them
- Why bicyclists “take the lane” and what motorists should do in response
- How to navigate bicycle related infrastructure such as sharrows, bike boxes, and green lanes

Note: Corresponding objectives from the 2016 Pedestrian and Bicycle Plan are noted next to actions.

Addressing the Need

This strategy builds upon Vision Zero recommendations to reduce speed limits, educate all street users on their rights and responsibilities, and create a shared culture of safety to reduce the disproportionate impacts of crashes on pedestrians, bicyclists, and other vulnerable street users.

An average of 37 people in Alexandria are killed or seriously injured each year using the City’s streets. When pedestrians and bicyclists are involved in crashes, the crashes are more likely to be serious—34 percent of bicyclist or pedestrian crashes are serious versus just 6 percent of all crashes.

Advancing City Plans and Goals

Vision Zero

- Promote a Culture of Safety

AMP Guiding Principles

- Safe
- Accessible
- Connected
- Sustainable
- Equitable
- Convenient
## Metrics

The strategies and policies in this chapter are intended to move the needle on the following measurable metrics:

<table>
<thead>
<tr>
<th>Metric</th>
<th>Target or Directionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of bicycle and pedestrian crashes</td>
<td>Decrease</td>
</tr>
<tr>
<td>Percentage of people walking or biking to work (mode share)</td>
<td>Increase</td>
</tr>
<tr>
<td>Linear feet of new sidewalk installed per year</td>
<td>Increase</td>
</tr>
<tr>
<td>Miles of on-street bike facilities</td>
<td>Increase</td>
</tr>
<tr>
<td>Miles of paved off-street trails</td>
<td>Increase</td>
</tr>
<tr>
<td>Number of bikeshare and other micromobility trips</td>
<td>Increase</td>
</tr>
<tr>
<td>Rating of ease of walking (Resident Survey) *</td>
<td>Increase</td>
</tr>
<tr>
<td>Rating of ease of travel by bicycle (Resident Survey) *</td>
<td>Increase</td>
</tr>
</tbody>
</table>

* The Alexandria Resident Survey reports results based on race/ethnicity, income, and age in addition to all residents.
