

Alexandria Mobility Plan

What is the AMP?

The existing 2008 Transportation Master Plan set the stage for transportation improvements over the last decade and ongoing major initiatives. The AMP will serve as a policy-oriented, strategic update to the Transportation Master Plan. The AMP team is working with the public to update the vision and goals, objectives, and priority strategies to help guide City staff and policy makers on important decisions related to transportation over the next 5 to 10 years. This effort is part of an ongoing process—the AMP will continue to be updated periodically going forward.

Overview

The AMP, a strategic update to the 2008 Transportation Master Plan, will ensure that transportation in the city continues to serve the needs of residents, businesses, and visitors as the region grows and new technology adds to the ways we get around. The AMP process will gather public input on tradeoffs and will establish clear priorities for improving mobility.

Key Plan Elements

Understand how **new technology** can improve mobility and safety in line with City goals.

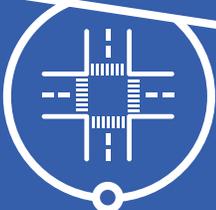

Identify strategies that make it easier to use sustainable modes of transportation – including new mobility options – to **reduce congestion and greenhouse gas emissions** in support of the *Environmental Action Plan 2040* goals

Develop a curbside management policy that **considers competing demands for limited city curbspace** – like parking, loading, and movement

Balance the mobility needs of all users by incorporating the *Complete Streets Policy and Guidelines* and applying street typologies to the city's roadways to guide future street usage and function

Determine priorities to increase transit ridership via completion of the three transitway corridors, integrating *Alexandria Transit Vision* recommendations, and other means to better serve existing and new riders

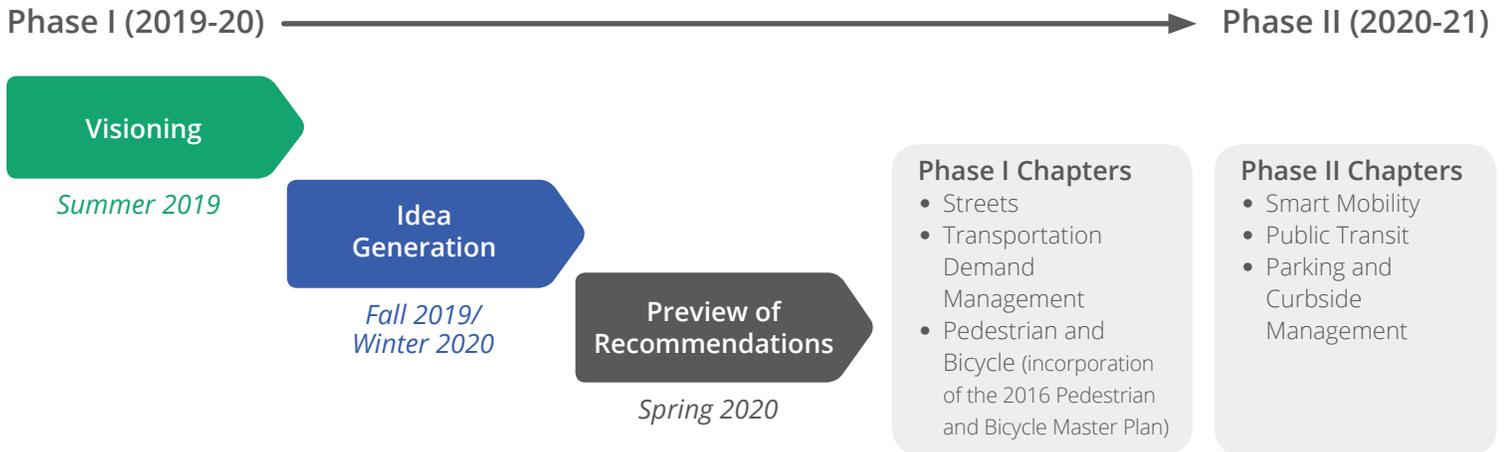

Support the needs and **safety of walking and cycling** by incorporating the *2016 Pedestrian and Bicycle Master Plan*

What Does “Mobility” Mean?

When people hear transportation, infrastructure and vehicles tends to come to mind. The term “**Mobility**” is more people-centric — it means having access to the transportation that gets you where you need to go. Since the Transportation Master Plan was created in 2008, new ways of traveling in and around the city have been developed — bus rapid transit, ridehailing apps, bikesharing services, electric scooters, etc. Because this update is meant to incorporate all these new services and seeks to prioritize people instead of infrastructure, the AMP team felt that a name change made sense.

Process

Get Involved!

The AMP Team is seeking your input on the City’s vision and priorities to inform the planning process.
